The **Semantic Web**, sometimes known as **Web 3.0** (not to be confused with **Web3**), is an extension of the **World Wide Web** through standards[1] set by the **World Wide Web Consortium** (W3C). The goal of the Semantic Web is to make **Internet** data **machine-readable**.

To enable the encoding of **semantics** with the data, technologies such as **Resource Description Framework** (RDF)[2] and **Web Ontology Language** (OWL)[3] are used. These technologies are used to formally represent **metadata**. For example, **ontology** can describe **concepts**, relationships between **entities**, and categories of things. These embedded semantics offer significant advantages such as **reasoning** over data and operating with heterogeneous data sources.[4] These standards promote common data formats and exchange protocols on the Web, fundamentally the RDF. According to the W3C, "The Semantic Web provides a common framework that allows data to be shared and reused across application, enterprise, and community boundaries." [5] The Semantic Web is therefore regarded as an integrator across different content and information applications and systems.

History

[edit]

The term was coined by **Tim Berners-Lee** for a web of data (or **data web**)[6] that can be processed by machines[7]—that is, one in which much of the **meaning** is **machine-readable**.

While its critics have questioned its feasibility, proponents argue that applications in [library and information science](#), industry, [biology](#) and [human sciences](#) research have already proven the validity of the original concept.^[8]

Berners-Lee originally expressed his vision of the Semantic Web in 1999 as follows:

I have a dream for the Web [in which computers] become capable of analyzing all the data on the Web – the content, links, and transactions between people and computers. A "Semantic Web", which makes this possible, has yet to emerge, but when it does, the day-to-day mechanisms of trade, bureaucracy and our daily lives will be handled by machines talking to machines. The "[intelligent agents](#)" people have touted for ages will finally materialize.^[9]

The 2001 [Scientific American](#) article by Berners-Lee, [Hendler](#), and [Lassila](#) described an expected evolution of the existing Web to a Semantic Web.^[10] In 2006, Berners-Lee and colleagues stated that: "This simple idea...remains largely unrealized".^[11] In 2013, more than four million Web domains (out of roughly 250 million total) contained Semantic Web markup.^[12]

Example

[\[edit\]](#)

In the following example, the text "Paul Schuster was born in Dresden" on a website will be annotated, connecting a person with their place of birth. The following [HTML](#) fragment shows how a small graph is being described, in [RDFa](#)-syntax using a [schema.org](#) vocabulary and a [Wikidata](#) ID:

```
<div vocab="https://schema.org/" typeof="Person">
  <span property="name">Paul Schuster</span> was born in
  <span property="birthPlace" typeof="Place" href="https://www.wikidata.org/entity/Q1731">
    <span property="name">Dresden</span>.
  </span>
</div>
```

Image not found or type unknown

Graph resulting from the RDFa example

The example defines the following five **triples** (shown in **Turtle** syntax). Each triple represents one edge in the resulting graph: the first element of the triple (the *subject*) is the name of the node where the edge starts, the second element (the *predicate*) the type of the edge, and the last and third element (the *object*) either the name of the node where the edge ends or a literal value (e.g. a text, a number, etc.).

```
_:a <https://www.w3.org/1999/02/22-rdf-syntax-ns#type> <https://schema.org/Person> .  
_:a <https://schema.org/name> "Paul Schuster" .  
_:a <https://schema.org/birthPlace> <https://www.wikidata.org/entity/Q1731> .  
<https://www.wikidata.org/entity/Q1731> <https://schema.org/itemtype> <https://schema.org/Place> .  
<https://www.wikidata.org/entity/Q1731> <https://schema.org/name> "Dresden" .
```

The triples result in the graph shown in **the given figure**.

Graph resulting from the RDFa example, enriched with further data from the Web

One of the advantages of using **Uniform Resource Identifiers (URIs)** is that they can be dereferenced using the **HTTP** protocol. According to the so-called **Linked Open Data** principles, such a dereferenced URI should result in a document that offers further data about the given URI. In this example, all URIs, both for edges and nodes (e.g. <https://schema.org/Person>, <https://schema.org/birthPlace>, <https://www.wikidata.org/entity/Q1731>) can be dereferenced and will result in further RDF graphs, describing the URI, e.g. that Dresden is a city in Germany, or that a person, in the sense of that URI, can be fictional.

The second graph shows the previous example, but now enriched with a few of the triples from the documents that result from dereferencing <https://schema.org/Person> (green edge) and <https://www.wikidata.org/entity/Q1731> (blue edges).

Additionally to the edges given in the involved documents explicitly, edges can be automatically inferred: the triple

`_:a <https://www.w3.org/1999/02/22-rdf-syntax-ns#type> <http://schema.org/Person> .`

from the original RDFa fragment and the triple

`<https://schema.org/Person> <http://www.w3.org/2002/07/owl#equivalentClass> <http://xmlns.com/foaf/0.1/Person> .`

from the document at <https://schema.org/Person> (green edge in the figure) allow to infer the following triple, given **OWL** semantics (red dashed line in the second Figure):

`_:a <https://www.w3.org/1999/02/22-rdf-syntax-ns#type> <http://xmlns.com/foaf/0.1/Person> .`

Background

[[edit](#)]

Further information: [Semantic network § History](#)

The concept of the **semantic network** model was formed in the early 1960s by researchers such as the **cognitive scientist Allan M. Collins**, **linguist Ross Quillian** and **psychologist Elizabeth F. Loftus** as a form to represent semantically structured knowledge. When applied in the context of the modern internet, it extends the network of **hyperlinked** human-readable **web pages** by inserting machine-readable metadata about pages and how they are related to each other. This enables **automated agents** to access the Web more intelligently and perform more tasks on behalf of users. The term "Semantic Web" was coined by **Tim Berners-Lee**,^[7] the inventor of the World Wide Web and director of the World Wide Web Consortium ("W3C"), which oversees the development of proposed Semantic Web standards. He defines the Semantic Web as "a web of data that can be processed directly and indirectly by machines".

Many of the technologies proposed by the W3C already existed before they were positioned under the W3C umbrella. These are used in various contexts, particularly those dealing with information that encompasses a limited and defined domain, and where sharing data is a common necessity, such as scientific research or data exchange among businesses. In addition, other technologies with similar goals have emerged, such as **microformats**.

Limitations of HTML

[[edit](#)]

Many files on a typical computer can be loosely divided into either human-readable documents, or machine-readable data. Examples of human-readable document files are mail messages, reports, and brochures. Examples of machine-readable data files are calendars, address books, playlists, and spreadsheets, which are presented to a user using an application program that lets the files be viewed, searched, and combined.

Currently, the World Wide Web is based mainly on documents written in **Hypertext Markup Language** (HTML), a markup convention that is used for coding a body of text interspersed with multimedia objects such as images and interactive forms. Metadata tags provide a method by which computers can categorize the content of web pages. In the examples below, the field names "keywords", "description" and "author" are assigned values such as "computing", and "cheap widgets for sale" and "John Doe".

```
<meta name="keywords" content="computing, computer studies, computer" />
<meta name="description" content="Cheap widgets for sale" />
<meta name="author" content="John Doe" />
```

Because of this metadata tagging and categorization, other computer systems that want to access and share this data can easily identify the relevant values.

With HTML and a tool to render it (perhaps **web browser** software, perhaps another **user agent**), one can create and present a page that lists items for sale. The HTML of this catalog page can make simple, document-level assertions such as "this document's title is 'Widget Superstore'", but there is no capability within the HTML itself to assert unambiguously that, for example, item number X586172 is an Acme Gizmo with a retail price of €199, or that it is a consumer product. Rather, HTML can only say that the span of text "X586172" is something that should be positioned near "Acme Gizmo" and "€199", etc. There is no way to say "this is a catalog" or even to establish that "Acme Gizmo" is a kind of title or that "€199" is a price. There is also no way to express that these pieces of information are bound together in describing a discrete item, distinct from other items perhaps listed on the page.

Semantic HTML refers to the traditional HTML practice of markup following intention, rather than specifying layout details directly. For example, the use of `` denoting "emphasis" rather than `<i>`, which specifies **italics**. Layout details are left up to the browser, in combination with **Cascading Style Sheets**. But this practice falls short of specifying the semantics of objects such as items for sale or prices.

Microformats extend HTML syntax to create **machine-readable** semantic markup about objects including people, organizations, events and products.^[13] Similar initiatives include **RDFa**, **Microdata** and **Schema.org**.

Semantic Web solutions

[edit]

The Semantic Web takes the solution further. It involves publishing in languages specifically designed for data: **Resource Description Framework** (RDF), **Web Ontology Language** (OWL), and Extensible Markup Language (**XML**). HTML describes documents and the links between them. RDF, OWL, and XML, by contrast, can describe arbitrary things such as people, meetings, or airplane parts.

These technologies are combined in order to provide descriptions that supplement or replace the content of Web documents. Thus, content may manifest itself as descriptive data stored in Web-accessible **databases**,^[14] or as markup within documents (particularly, in Extensible HTML (**XHTML**) interspersed with XML, or, more often, purely in XML, with layout or rendering cues stored separately). The machine-readable descriptions enable content managers to add meaning to the content, i.e., to describe the structure of the knowledge we have about that content. In this way, a machine can process knowledge itself, instead of text, using processes similar to human **deductive reasoning** and **inference**, thereby obtaining more meaningful results and helping computers to perform automated information gathering and research.

An example of a tag that would be used in a non-semantic web page:

```
<item>blog</item>
```

Encoding similar information in a semantic web page might look like this:

```
<item rdf:about="https://example.org/semantic-web/">Semantic Web</item>
```

Tim Berners-Lee calls the resulting network of **Linked Data** the **Giant Global Graph**, in contrast to the HTML-based World Wide Web. Berners-Lee posits that if the past was document sharing, the future is **data sharing**. His answer to the question of "how" provides three points of instruction. One, a URL should point to the data. Two, anyone accessing the URL should get data back. Three, relationships in the data should point to additional URLs with data.

Tags and identifiers

[edit]

Tags, including hierarchical categories and tags that are collaboratively added and maintained (e.g. with **folksonomies**) can be considered part of, of potential use to or a step towards the semantic Web vision.^{[15][16][17]}

Unique **identifiers**, including hierarchical categories and collaboratively added ones, analysis tools and **metadata**, including tags, can be used to create forms of semantic webs – webs that are to a certain degree semantic.[18] In particular, such has been used for structuring scientific research i.a. by research topics and **scientific fields** by the projects **OpenAlex**,[19][20][21] **Wikidata** and **Scholia** which are under development and provide **APIs**, Web-pages, feeds and graphs for various **semantic queries**.

Web 3.0

[[edit](#)]

Tim Berners-Lee has described the Semantic Web as a component of Web 3.0.[22]

People keep asking what Web 3.0 is. I think maybe when you've got an overlay of **scalable vector graphics** – everything rippling and folding and looking misty – on **Web 2.0** and access to a semantic Web integrated across a huge space of data, you'll have access to an unbelievable data resource ...

—*Tim Berners-Lee, 2006*

"Semantic Web" is sometimes used as a synonym for "Web 3.0",[23] though the definition of each term varies.

Beyond Web 3.0

[[edit](#)]

The next generation of the Web is often termed Web 4.0, but its definition is not clear. According to some sources, it is a Web that involves **artificial intelligence**,[24] the **internet of things**, **pervasive computing**, **ubiquitous computing** and the **Web of Things** among other concepts.[25] According to the European Union, Web 4.0 is "the expected fourth generation of the World Wide Web. Using advanced artificial and ambient intelligence, the internet of things, trusted blockchain transactions, virtual worlds and XR capabilities, digital and real objects and environments are fully integrated and communicate with each other, enabling truly intuitive, immersive experiences, seamlessly blending the physical and digital worlds".[26]

Challenges

[[edit](#)]

Some of the challenges for the Semantic Web include vastness, vagueness, uncertainty, inconsistency, and deceit. **Automated reasoning systems** will have to deal with all of these issues in order to deliver on the promise of the Semantic Web.

- Vastness: The World Wide Web contains many billions of pages. The **SNOMED CT medical terminology ontology** alone contains 370,000 **class** names, and existing technology has not yet been able to eliminate all semantically duplicated terms. Any automated reasoning system will have to deal with truly huge inputs.
- Vagueness: These are imprecise concepts like "young" or "tall". This arises from the vagueness of user queries, of concepts represented by content providers, of matching query terms to provider terms and of trying to combine different **knowledge bases** with overlapping but subtly different concepts. **Fuzzy logic** is the most common technique for dealing with vagueness.
- Uncertainty: These are precise concepts with uncertain values. For example, a patient might present a set of symptoms that correspond to a number of different distinct diagnoses each with a different probability. **Probabilistic** reasoning techniques are generally employed to address uncertainty.
- Inconsistency: These are logical contradictions that will inevitably arise during the development of large ontologies, and when ontologies from separate sources are combined. Deductive reasoning fails catastrophically when faced with inconsistency, because "**anything follows from a contradiction**". **Defeasible reasoning** and **paraconsistent reasoning** are two techniques that can be employed to deal with inconsistency.
- Deceit: This is when the producer of the information is intentionally misleading the consumer of the information. **Cryptography** techniques are currently utilized to alleviate this threat. By providing a means to determine the information's integrity, including that which relates to the identity of the entity that produced or published the information, however **credibility** issues still have to be addressed in cases of potential deceit.

This list of challenges is illustrative rather than exhaustive, and it focuses on the challenges to the "unifying logic" and "proof" layers of the Semantic Web. The World Wide Web Consortium (W3C) Incubator Group for Uncertainty Reasoning for the World Wide Web^[27] (URW3-XG) final report lumps these problems together under the single heading of "uncertainty".^[28] Many of the techniques mentioned here will require extensions to the Web Ontology Language (OWL) for example to annotate conditional probabilities. This is an area of active research.^[29]

Standards

[\[edit\]](#)

Standardization for Semantic Web in the context of Web 3.0 is under the care of W3C.^[30]

Components

[\[edit\]](#)

The term "Semantic Web" is often used more specifically to refer to the formats and technologies that enable it.^[5] The collection, structuring and recovery of linked data are enabled by technologies that provide a **formal description** of concepts, terms, and relationships

within a given **knowledge domain**. These technologies are specified as W3C standards and include:

- **Resource Description Framework** (RDF), a general method for describing information
- **RDF Schema** (RDFS)
- **Simple Knowledge Organization System** (SKOS)
- **SPARQL**, an RDF query language
- **Notation3** (N3), designed with human readability in mind
- **N-Triples**, a format for storing and transmitting data
- **Turtle** (Terse RDF Triple Language)
- **Web Ontology Language** (OWL), a family of **knowledge representation languages**
- **Rule Interchange Format** (RIF), a framework of web rule language dialects supporting rule interchange on the Web
- **JavaScript Object Notation for Linked Data** (JSON-LD), a JSON-based method to describe data
- **ActivityPub**, a generic way for client and server to communicate with each other. This is used by the popular decentralized social network **Mastodon**.

The **Semantic Web Stack** illustrates the architecture of the Semantic Web. The functions and relationships of the components can be summarized as follows:[31]

- XML provides an elemental syntax for content structure within documents, yet associates no semantics with the meaning of the content contained within. XML is not at present a necessary component of Semantic Web technologies in most cases, as alternative syntaxes exist, such as **Turtle**. Turtle is a de facto standard, but has not been through a formal standardization process.
- **XML Schema** is a language for providing and restricting the structure and content of elements contained within XML documents.
- RDF is a simple language for expressing **data models**, which refer to objects ("**web resources**") and their relationships. An RDF-based model can be represented in a variety of syntaxes, e.g., **RDF/XML**, N3, Turtle, and RDFa. RDF is a fundamental standard of the Semantic Web.[32][33]
- RDF Schema extends RDF and is a vocabulary for describing properties and classes of RDF-based resources, with semantics for generalized-hierarchies of such properties and classes.
- OWL adds more vocabulary for describing properties and classes: among others, relations between classes (e.g. disjointness), cardinality (e.g. "exactly one"), equality, richer typing of properties, characteristics of properties (e.g. symmetry), and enumerated classes.
- SPARQL is a protocol and query language for semantic web data sources.
- RIF is the W3C Rule Interchange Format. It is an XML language for expressing Web rules that computers can execute. RIF provides multiple versions, called dialects. It includes a RIF Basic Logic Dialect (RIF-BLD) and RIF Production Rules Dialect (RIF PRD).

Current state of standardization

[[edit](#)]

Well-established standards:

- **RDF** - Resource Description Framework
- **RDFS** - Resource Description Framework Schema
- **RIF** - Rule Interchange Format
- **SPARQL** - 'SPARQL Protocol and RDF Query Language'
- **Unicode**
- **URI** - Uniform Resource Identifier
- **OWL** - Web Ontology Language
- **XML** - Extensible Markup Language

Not yet fully realized:

- Unifying Logic and Proof layers
- **SWRL** - Semantic Web Rule Language

Applications

[[edit](#)]

The intent is to enhance the **usability** and usefulness of the Web and its interconnected **resources** by creating **semantic web services**, such as:

- Servers that expose existing data systems using the RDF and SPARQL standards. Many converters to RDF exist from different applications.[34] **Relational databases** are an important source. The semantic web server attaches to the existing system without affecting its operation.
- Documents "marked up" with semantic information (an **extension** of the HTML <meta> **tags** used in today's Web pages to supply information for **Web search engines** using **web crawlers**). This could be **machine-understandable** information about the human-understandable content of the document (such as the creator, title, description, etc.) or it could be purely metadata representing a set of facts (such as resources and services elsewhere on the site). Note that *anything* that can be identified with a *Uniform Resource Identifier* (URI) can be described, so the semantic web can reason about animals, people, places, ideas, etc. There are four semantic annotation formats that can be used in HTML documents; Microformat, RDFa, Microdata and **JSON-LD**. [35] Semantic markup is often generated automatically, rather than manually.

Arguments as distinct semantic units with specified relations and version control on **Kialo**

- Common metadata vocabularies (**ontologies**) and maps between vocabularies that allow document creators to know how to mark up their documents so that agents can use the information in the supplied metadata (so that *Author* in the sense of 'the Author of the page' will not be confused with *Author* in the sense of a book that is the subject of a book review).
- Automated agents to perform tasks for users of the semantic web using this data.
- **Semantic translation**. An alternative or complementary approach are improvements to contextual and semantic understanding of texts – these could be aided via Semantic Web methods so that only increasingly small numbers of mistranslations need to be corrected **in manual or semi-automated post-editing**.
- Web-based services (often with agents of their own) to supply information specifically to agents, for example, a **Trust service** that an agent could ask if some online store has a history of poor service or **spamming**.
- Semantic Web ideas are implemented in collaborative structured **argument mapping** sites where their relations are organized semantically, arguments can be mirrored (linked) to multiple places, reused (copied), rated, and **changed** as semantic distinct units. Ideas for such, or a more widely adopted "World Wide Argument Web", go back to at least 2007[36] and have been implemented to some degree in **Argüman**[37] and **Kialo**. Further steps towards semantic web services may include enabling "Querying", argument search engines,[38] and "summarizing the contentious and agreed-upon points of a discussion".[39]

Such services could be useful to public search engines, or could be used for **knowledge management** within an organization. Business applications include:

- Facilitating the integration of information from mixed sources[40]
- Dissolving ambiguities in corporate terminology
- Improving **information retrieval** thereby reducing **information overload** and increasing the refinement and precision of the data retrieved[41][42][43][44]
- Identifying relevant information with respect to a given domain[45]
- Providing decision making support

In a corporation, there is a closed group of users and the management is able to enforce company guidelines like the adoption of specific ontologies and use of **semantic annotation**. Compared to the public Semantic Web there are lesser requirements on **scalability** and the information circulating within a company can be more trusted in general; privacy is less of an issue outside of handling of customer data.

Skeptical reactions

[edit]

Practical feasibility

[edit]

Critics question the basic feasibility of a complete or even partial fulfillment of the Semantic Web, pointing out both difficulties in setting it up and a lack of general-purpose usefulness that prevents the required effort from being invested. In a 2003 paper, Marshall and Shipman point out the cognitive overhead inherent in formalizing knowledge, compared to the authoring of traditional web [hypertext](#):[\[46\]](#)

While learning the basics of HTML is relatively straightforward, learning a knowledge representation language or tool requires the author to learn about the representation's methods of abstraction and their effect on reasoning. For example, understanding the class-instance relationship, or the superclass-subclass relationship, is more than understanding that one concept is a "type of" another concept. [...] These abstractions are taught to computer scientists generally and knowledge engineers specifically but do not match the similar natural language meaning of being a "type of" something. Effective use of such a formal representation requires the author to become a skilled knowledge engineer in addition to any other skills required by the domain. [...] Once one has learned a formal representation language, it is still often much more effort to express ideas in that representation than in a less formal representation [...]. Indeed, this is a form of programming based on the declaration of semantic data and requires an understanding of how reasoning algorithms will interpret the authored structures.

According to Marshall and Shipman, the [tacit](#) and changing nature of much knowledge adds to the [knowledge engineering](#) problem, and limits the Semantic Web's applicability to specific domains. A further issue that they point out are domain- or organization-specific ways to express knowledge, which must be solved through community agreement rather than only technical means.[\[46\]](#) As it turns out, specialized communities and organizations for intra-company projects have tended to adopt semantic web technologies greater than peripheral and less-specialized communities.[\[47\]](#) The practical constraints toward adoption have appeared less challenging where domain and scope is more limited than that of the general public and the World-Wide Web.[\[47\]](#)

Finally, Marshall and Shipman see pragmatic problems in the idea of ([Knowledge Navigator](#)-style) intelligent agents working in the largely manually curated Semantic Web:[\[46\]](#)

In situations in which user needs are known and distributed information resources are well described, this approach can be highly effective; in situations that are not foreseen and that bring together an unanticipated array of information resources, the Google approach is more robust. Furthermore, the Semantic Web relies on inference

chains that are more brittle; a missing element of the chain results in a failure to perform the desired action, while the human can supply missing pieces in a more Google-like approach. [...] cost-benefit tradeoffs can work in favor of specially-created Semantic Web metadata directed at weaving together sensible well-structured domain-specific information resources; close attention to user/customer needs will drive these federations if they are to be successful.

Cory Doctorow's critique ("metacrap")^[48] is from the perspective of human behavior and personal preferences. For example, people may include spurious metadata into Web pages in an attempt to mislead Semantic Web engines that naively assume the metadata's veracity. This phenomenon was well known with metatags that fooled the Altavista ranking algorithm into elevating the ranking of certain Web pages: the Google indexing engine specifically looks for such attempts at manipulation. Peter Gärdenfors and Timo Honkela point out that logic-based semantic web technologies cover only a fraction of the relevant phenomena related to semantics.^{[49][50]}

Censorship and privacy

[\[edit\]](#)

Enthusiasm about the semantic web could be tempered by concerns regarding censorship and privacy. For instance, text-analyzing techniques can now be easily bypassed by using other words, metaphors for instance, or by using images in place of words. An advanced implementation of the semantic web would make it much easier for governments to control the viewing and creation of online information, as this information would be much easier for an automated content-blocking machine to understand. In addition, the issue has also been raised that, with the use of FOAF files and geolocation meta-data, there would be very little anonymity associated with the authorship of articles on things such as a personal blog. Some of these concerns were addressed in the "Policy Aware Web" project^[51] and is an active research and development topic.

Doubling output formats

[\[edit\]](#)

Another criticism of the semantic web is that it would be much more time-consuming to create and publish content because there would need to be two formats for one piece of data: one for human viewing and one for machines. However, many web applications in development are addressing this issue by creating a machine-readable format upon the publishing of data or the request of a machine for such data. The development of microformats has been one reaction to this kind of criticism. Another argument in defense of the feasibility of semantic web is the likely falling price of human intelligence tasks in digital labor markets, such as Amazon's Mechanical Turk.^{*[citation needed]*}

Specifications such as **eRDF** and **RDFa** allow arbitrary RDF data to be embedded in HTML pages. The **GRDDL** (Gleaning Resource Descriptions from Dialects of Language) mechanism allows existing material (including microformats) to be automatically interpreted as RDF, so publishers only need to use a single format, such as HTML.

Research activities on corporate applications

[\[edit\]](#)

The first research group explicitly focusing on the Corporate Semantic Web was the ACACIA team at **INRIA-Sophia-Antipolis**, founded in 2002. Results of their work include the **RDF(S)** based **Corese**^[52] search engine, and the application of semantic web technology in the realm of **distributed artificial intelligence** for knowledge management (e.g. ontologies and **multi-agent systems** for corporate semantic Web) ^[53] and **E-learning**.^[54]

Since 2008, the Corporate Semantic Web research group, located at the **Free University of Berlin**, focuses on building blocks: Corporate Semantic Search, Corporate Semantic Collaboration, and Corporate Ontology Engineering.^[55]

Ontology engineering research includes the question of how to involve non-expert users in creating ontologies and semantically annotated content^[56] and for extracting explicit knowledge from the interaction of users within enterprises.

Future of applications

[\[edit\]](#)

Tim O'Reilly, who coined the term Web 2.0, proposed a long-term vision of the Semantic Web as a web of data, where sophisticated applications are navigating and manipulating it.^[57] The data web transforms the World Wide Web from a **distributed file system** into a **distributed database**.^[58]

Sydney is the **capital city** of the **state** of **New South Wales** and the **most populous city in Australia**. Located on Australia's east coast, the metropolis surrounds **Sydney Harbour** and extends about 80 km (50 mi) from the **Pacific Ocean** in the east to the **Blue Mountains** in the west, and about 80 km (50 mi) from **Ku-ring-gai Chase National Park** and the **Hawkesbury River** in the north and north-west, to the **Royal National Park** and **Macarthur** in the south and south-west.[5] Greater Sydney consists of 658 suburbs, spread across 33 local government areas. Residents of the city are colloquially known as "Sydneyiders".[6] The estimated population in June 2023 was 5,450,496,[1] which is about 66% of the state's population.[7] The city's nicknames include the **Emerald City** and the **Harbour City**. [8]

There is evidence that **Aboriginal Australians** inhabited the **Greater Sydney** region at least 30,000 years ago, and **their engravings** and cultural sites are common. The **traditional custodians** of the land on which modern Sydney stands are the clans of the **Darug**, **Dharawal** and **Eora**. [9] During his **first Pacific voyage** in 1770, **James Cook** charted the eastern coast of Australia, making landfall at **Botany Bay**. In 1788, the **First Fleet** of **convicts**, led by **Arthur Phillip**, founded Sydney as a British **penal colony**, the first European settlement in Australia. [10] After **World War II**, Sydney experienced mass migration and by 2021 over 40 per cent of the population was born overseas. Foreign countries of birth with the greatest representation are mainland China, India, the United Kingdom, Vietnam and the Philippines. [11]

Despite being one of the most expensive cities in the world, [12][13] Sydney frequently ranks in the top ten **most liveable cities**. [14][15][16] It is classified as an **Alpha+ city** by the **Globalization and World Cities Research Network**, indicating its influence in the region and throughout the world. [17][18] Ranked eleventh in the world for economic opportunity, [19] Sydney has an advanced market economy with strengths in education, finance, manufacturing and **tourism**. [20][21] The **University of Sydney** and the **University of New South Wales** are ranked 18th and 19th in the world respectively. [22]

Sydney has hosted major international sporting events such as the **2000 Summer Olympics**, the **2003 Rugby World Cup Final**, and the **2023 FIFA Women's World Cup Final**. The city is among the top fifteen most-visited, [23] with millions of tourists coming each year to see the city's landmarks. [24] The city has over 1,000,000 ha (2,500,000 acres) of **nature reserves and parks**, [25] and its **notable natural features** include **Sydney Harbour** and **Royal National Park**. The **Sydney Harbour Bridge** and the World Heritage-listed **Sydney Opera House** are major tourist attractions. **Central Station** is the hub of Sydney's suburban train, metro and light rail networks and longer-distance services. The main passenger airport serving the city is

Kingsford Smith Airport, one of the world's oldest continually operating airports.[26]

Toponymy

[edit]

In 1788, Captain **Arthur Phillip**, the first governor of New South Wales, named the cove where the first British settlement was established **Sydney Cove** after Home Secretary **Thomas Townshend, 1st Viscount Sydney**.^[27] The cove was called *Warrane* by the Aboriginal inhabitants.^[28] Phillip considered naming the settlement **Albion**, but this name was never officially used.^[27] By 1790 Phillip and other officials were regularly calling the township Sydney.^[29] Sydney was declared a city in 1842.^[30]

The **Gadigal** (Cadigal) clan, whose territory stretches along the southern shore of **Port Jackson** from **South Head** to **Darling Harbour**, are the traditional owners of the land on which the British settlement was initially established, and call their territory *Gadi* (*Cadi*). Aboriginal clan names within the Sydney region were often formed by adding the suffix "-gal" to a word denoting the name for their territory, a specific place in their territory, a food source, or totem. Greater Sydney covers the traditional lands of 28 known Aboriginal clans.^[31]

History

[edit]

Main article: **History of Sydney**

For a chronological guide, see **Timeline of Sydney**.

First inhabitants of the region

[edit]

Charcoal drawing of kangaroos in **Heathcote National Park**

The first people to inhabit the area now known as Sydney were **Aboriginal Australians** who had migrated from southeast Asia via northern Australia.^[32] Flaked pebbles found in Western Sydney's gravel sediments might indicate human occupation from 45,000 to 50,000 years ago,^[33] while **radiocarbon dating** has shown evidence of human activity in the region from around 30,000 years ago.^[34] Prior to the arrival of the British, there were 4,000 to 8,000 Aboriginal people in the greater Sydney region.^[35]^[9]

The inhabitants subsisted on fishing, hunting, and gathering plants and shellfish. The diet of the coastal clans was more reliant on seafood whereas hinterland clans ate more forest animals and plants. The clans had distinctive equipment and weapons mostly made of stone, wood, plant materials, bone and shell. They also differed in their body decorations, hairstyles, songs and dances. Aboriginal clans had a rich ceremonial life, part of a belief system centring on ancestral, totemic and supernatural beings. People from different clans and language groups came together to participate in initiation and other ceremonies. These occasions fostered trade, marriages and clan alliances.[36]

The earliest British settlers recorded the word 'Eora' as an Aboriginal term meaning either 'people' or 'from this place'. [37][9] The clans of the Sydney area occupied land with traditional boundaries. There is debate, however, about which group or nation these clans belonged to, and the extent of differences in language and rites. The major groups were the coastal Eora people, the Dharug (Darug) occupying the inland area from Parramatta to the Blue Mountains, and the Dharawal people south of Botany Bay.[9] Darginung and Gundungurra languages were spoken on the fringes of the Sydney area.[38]

Aboriginal clans of Sydney area, as recorded by early British settlers

Clan	Territory name	Location
Bediagal	Not recorded	Probably north-west of Parramatta
Birrabbirragal	Birrabbirra	Lower Sydney Harbour around Sow and Pigs reef
Boolbainora	Boolbainmatta	Parramatta area
Borogegal	Booragy	Probably Bradleys Head and surrounding area
Boromedegal	Not recorded	Parramatta
Buruberongal	Not recorded	North-west of Parramatta
Darramurragal	Not recorded	Turramarra area
Gadigal	Cadi (Gadi)	South side of Port Jackson, from South Head to Darling Harbour
Gahbrogal	Not recorded	Liverpool and Cabramatta area
Gamaragal	Cammeray	North shore of Port Jackson
Gameygal	Kamay	Botany Bay
Gannemegal	Warmul	Parramatta area
Garigal	Not recorded	Broken Bay area
Gayamaygal	Kayeemy	Manly Cove
Gweagal	Gwea	Southern shore of Botany Bay
Wallumedegal	Wallumede	North shore of Port Jackson, opposite Sydney Cove
Wangal	Wann	South side of Port Jackson, from Darling Harbour to Rose Hill

Clans of the Sydney region whose territory wasn't reliably recorded are: the Domaragal, Doogagal, Gannalgal, Gomerigal, Gooneeowlgal, Goorunggurregal, Gorualgal, Murrooredial, Noronggerragal, Oryangsoora and Wandeandegal.

Note: The names and territory boundaries do not always correspond with those used by contemporary Aboriginal groups of the greater Sydney area.[38][39][40]

The first meeting between Aboriginals and British explorers occurred on 29 April 1770 when Lieutenant James Cook landed at **Botany Bay** (Kamay[41]) and encountered the **Gweagal** clan.[42] Two Gweagal men opposed the landing party and one was shot and wounded.[43][44] Cook and his crew stayed at Botany Bay for a week, collecting water, timber, fodder and botanical specimens and exploring the surrounding area. Cook sought to establish relations with the Aboriginal population without success.[45]

Convict town (1788–1840)

[edit]

*The Founding of Australia, 26 January 1788, by Captain **Arthur Phillip** R.N., Sydney Cove. Painting by **Algernon Talmage**.*

Britain had been sending convicts to its American colonies for most of the eighteenth century, and the loss of these colonies in 1783 was the impetus to establish a penal colony at Botany Bay. Proponents of colonisation also pointed to the strategic importance of a new base in the Asia-Pacific region and its potential to provide much-needed timber and flax for the navy.[46]

The **First Fleet** of 11 ships under the command of Captain **Arthur Phillip** arrived in Botany Bay in January 1788. It comprised more than a thousand settlers, including 736 convicts.[47] The fleet soon moved to the more suitable **Port Jackson** where a settlement was established at **Sydney Cove** on 26 January 1788.[48] The colony of New South Wales was formally proclaimed by Governor Phillip on 7 February 1788. Sydney Cove offered a fresh water supply and a safe harbour, which Philip described as "the finest Harbour in the World ... Here a Thousand Sail of the Line may ride in the most perfect Security".[49]

The settlement was planned to be a self-sufficient penal colony based on subsistence agriculture. Trade and shipbuilding were banned in order to keep the convicts isolated.

However, the soil around the settlement proved poor and the first crops failed, leading to several years of hunger and strict rationing. The food crisis was relieved with the arrival of the **Second Fleet** in mid-1790 and the **Third Fleet** in 1791.[50] Former convicts received small grants of land, and government and private farms spread to the more fertile lands around **Parramatta**, **Windsor** and **Camden** on the **Cumberland Plain**. By 1804, the colony was self-sufficient in food.[51]

A smallpox epidemic in April 1789 killed about half the region's Indigenous population.[9][52] In November 1790 **Bennelong** led a group of survivors of the Sydney clans into the settlement, establishing a continuous presence of Aboriginal Australians in settled Sydney.[53]

Phillip had been given no instructions for urban development, but in July 1788 submitted a plan for the new town at **Sydney Cove**. It included a wide central avenue, a permanent Government House, law courts, hospital and other public buildings, but no provision for warehouses, shops, or other commercial buildings. Phillip promptly ignored his own plan, and unplanned development became a feature of Sydney's topography.[54][55]

Thomas Watling's *View of Sydney Cove*, c. 1794–1796

After Phillip's departure in December 1792, the colony's military officers began acquiring land and importing consumer goods from visiting ships. Former convicts engaged in trade and opened small businesses. Soldiers and former convicts built houses on Crown land, with or without official permission, in what was now commonly called Sydney town. Governor **William Bligh** (1806–08) imposed restrictions on commerce and ordered the demolition of buildings erected on Crown land, including some owned by past and serving military officers. The resulting conflict culminated in the **Rum Rebellion** of 1808, in which Bligh was deposed by the **New South Wales Corps**. [56][57]

Governor **Lachlan Macquarie** (1810–1821) played a leading role in the development of Sydney and New South Wales, establishing a bank, a currency and a hospital. He employed a planner to design the street layout of Sydney and commissioned the construction of roads, wharves, churches, and public buildings. **Parramatta Road**, linking Sydney and Parramatta, was opened in 1811,[58] and a road across the **Blue Mountains** was completed in 1815, opening the way for large-scale farming and grazing west of the **Great Dividing Range**. [59][60]

Following the departure of Macquarie, official policy encouraged the emigration of free British settlers to New South Wales. Immigration to the colony increased from 900 free settlers in 1826–30 to 29,000 in 1836–40, many of whom settled in Sydney. [61][62] By the 1840s Sydney

exhibited a geographic divide between poor and working-class residents living west of the **Tank Stream** in areas such as **The Rocks**, and the more affluent residents living to its east.[62] Free settlers, free-born residents and former convicts now represented the vast majority of the population of Sydney, leading to increasing public agitation for responsible government and an end to transportation. Transportation to New South Wales ceased in 1840.[63]

The **Castle Hill convict rebellion** of 1804

Conflict on the Cumberland Plain

[[edit](#)]

In 1804, Irish convicts led around 300 rebels in the **Castle Hill Rebellion**, an attempt to march on Sydney, commandeer a ship, and sail to freedom.[64] Poorly armed, and with their leader Philip Cunningham captured, the main body of insurgents were routed by about 100 troops and volunteers at **Rouse Hill**. At least 39 convicts were killed in the uprising and subsequent executions.[65][66]

As the colony spread to the more fertile lands around the **Hawkesbury River**, north-west of Sydney, conflict between the settlers and the **Darug** people intensified, reaching a peak from 1794 to 1810. Bands of Darug people, led by **Pemulwuy** and later by his son **Tedbury**, burned crops, killed livestock and raided settler stores in a pattern of resistance that was to be repeated as the **colonial frontier expanded**. A military garrison was established on the Hawkesbury in 1795. The death toll from 1794 to 1800 was 26 settlers and up to 200 Darug.[67][68]

Conflict again erupted from 1814 to 1816 with the expansion of the colony into Dharawal country in the Nepean region south-west of Sydney. Following the deaths of several settlers, Governor Macquarie dispatched three military detachments into Dharawal lands, culminating in the **Appin massacre** (April 1816) in which at least 14 Aboriginal people were killed.[69][70]

Colonial city (1841–1900)

[[edit](#)]

The New South Wales Legislative Council became a semi-elected body in 1842. Sydney was declared a city the same year, and a governing council established, elected on a restrictive property franchise.[63]

Aerial illustration of Sydney, 1888

The discovery of gold in New South Wales and Victoria in 1851 initially caused economic disruption as men moved to the goldfields. Melbourne soon overtook Sydney as Australia's largest city, leading to an enduring rivalry between the two. However, increased immigration from overseas and wealth from gold exports increased demand for housing, consumer goods, services and urban amenities.[71] The New South Wales government also stimulated growth by investing heavily in railways, trams, roads, ports, telegraph, schools and urban services.[72] The population of Sydney and its suburbs grew from 95,600 in 1861 to 386,900 in 1891.[73] The city developed many of its characteristic features. The growing population packed into rows of terrace houses in narrow streets. New public buildings of sandstone abounded, including at the [University of Sydney](#) (1854–61),[74] the [Australian Museum](#) (1858–66),[75] the Town Hall (1868–88),[76] and the [General Post Office](#) (1866–92).[77] Elaborate [coffee palaces](#) and hotels were erected.[78] Daylight bathing at Sydney's beaches was banned, but segregated bathing at designated ocean baths was popular.[79]

Drought, the winding down of public works and a financial crisis led to economic depression in Sydney throughout most of the 1890s. Meanwhile, the Sydney-based premier of New South Wales, [George Reid](#), became a key figure in the process of federation.[80]

State capital (1901–present)

[[edit](#)]

A [tramcar](#) on George Street in 1920. Sydney once had one of the largest [tram networks](#) in the British Empire.

When the six colonies federated on 1 January 1901, Sydney became the capital of the State of New South Wales. The spread of **bubonic plague** in 1900 prompted the state government to modernise the wharves and demolish inner-city slums. The outbreak of the First World War in 1914 saw more Sydney males volunteer for the armed forces than the Commonwealth authorities could process, and helped reduce unemployment. Those returning from the war in 1918 were promised "homes fit for heroes" in new suburbs such as Daceyville and Matraville. "Garden suburbs" and mixed industrial and residential developments also grew along the rail and tram corridors.[62] The population reached one million in 1926, after Sydney had regained its position as the most populous city in Australia.[81] The government created jobs with massive public projects such as the electrification of the **Sydney rail network** and building the Sydney Harbour Bridge.[82]

Sydney Harbour Bridge opening day, 19 March 1932

Sydney was more severely affected by the **Great Depression** of the 1930s than regional New South Wales or Melbourne.[83] New building almost came to a standstill, and by 1933 the unemployment rate for male workers was 28 per cent, but over 40 per cent in working class areas such as Alexandria and Redfern. Many families were evicted from their homes and shanty towns grew along coastal Sydney and Botany Bay, the largest being "Happy Valley" at **La Perouse**. [84] The Depression also exacerbated political divisions. In March 1932, when populist Labor premier **Jack Lang** attempted to open the Sydney Harbour Bridge he was upstaged by **Francis de Groot** of the far-right **New Guard**, who slashed the ribbon with a sabre.[85]

In January 1938, Sydney celebrated the **Empire Games** and the sesquicentenary of European settlement in Australia. One journalist wrote, "Golden beaches. Sun tanned men and maidens...Red-roofed villas terraced above the blue waters of the harbour...Even **Melbourne** seems like some grey and stately city of Northern Europe compared with Sydney's sub-tropical splendours." A congress of the "Aborigines of Australia" declared 26 January "A **Day of Mourning**" for "the whiteman's seizure of our country." [86]

With the outbreak of **Second World War** in 1939, Sydney experienced a surge in industrial development. Unemployment virtually disappeared and women moved into jobs previously typically reserved for males. Sydney was attacked by **Japanese submarines** in May and June 1942 with 21 killed. Households built **air raid** shelters and performed drills.[87] **Military establishments** in response to **World War II in Australia** included the **Garden Island Tunnel System**, the only **tunnel warfare** complex in Sydney, and the heritage-listed military **fortification**

systems [Bradleys Head Fortification Complex](#) and [Middle Head Fortifications](#), which were part of a total [defence system for Sydney Harbour](#).^[88]

A post-war immigration and baby boom saw a rapid increase in Sydney's population and the spread of low-density housing in suburbs throughout the Cumberland Plain. Immigrants—mostly from Britain and continental Europe—and their children accounted for over three-quarters of Sydney's population growth between 1947 and 1971.^[89] The newly created Cumberland County Council oversaw low-density residential developments, the largest at [Green Valley](#) and [Mount Druitt](#). Older residential centres such as Parramatta, [Bankstown](#) and [Liverpool](#) became suburbs of the metropolis.^[90] Manufacturing, protected by high tariffs, employed over a third of the workforce from 1945 to the 1960s. However, as the long post-war economic boom progressed, retail and other service industries became the main source of new jobs.^[91]

An estimated one million onlookers, most of the city's population, watched [Queen Elizabeth II](#) land in 1954 at Farm Cove where Captain Phillip had raised the Union Jack 165 years earlier, commencing her [Australian Royal Tour](#). It was the first time a reigning monarch stepped onto Australian soil.^[92]

Increasing high-rise development in Sydney and the expansion of suburbs beyond the "green belt" envisaged by the planners of the 1950s resulted in community protests. In the early 1970s, trade unions and resident action groups imposed [green bans](#) on development projects in historic areas such as The Rocks. Federal, State and local governments introduced heritage and environmental legislation.^[62] The Sydney Opera House was also controversial for its cost and disputes between architect [Jørn Utzon](#) and government officials. However, soon after it opened in 1973 it became a major tourist attraction and symbol of the city.^[93] The progressive reduction in tariff protection from 1974 began the transformation of Sydney from a manufacturing centre to a "world city".^[94] From the 1980s, [overseas immigration](#) grew rapidly, with Asia, the Middle East and Africa becoming major sources. By 2021, the population of Sydney was over 5.2 million, with 40% of the population born overseas. China and India overtook England as the largest source countries for overseas-born residents.^[95]

Geography

[\[edit\]](#)

Main article: [Geography of Sydney](#)

Topography

[\[edit\]](#)

Image not found or type unknown

Sydney lies on a **submergent coastline** where the ocean level has risen to flood deep **rias**.

Sydney is a coastal basin with the **Tasman Sea** to the east, the **Blue Mountains** to the west, the Hawkesbury River to the north, and the **Woronora Plateau** to the south.

Sydney spans two geographic regions. The **Cumberland Plain** lies to the south and west of the Harbour and is relatively flat. The **Hornsby Plateau** is located to the north and is dissected by steep valleys. The flat areas of the south were the first to be developed; it was not until the construction of the Sydney Harbour Bridge that the northern reaches became more heavily populated. **Seventy surf beaches** can be found along its coastline, with Bondi Beach being the most famous.

The **Nepean River** wraps around the western edge of the city and becomes the Hawkesbury River before reaching **Broken Bay**. Most of Sydney's water storages can be found on tributaries of the Nepean River. The **Parramatta River** is mostly industrial and drains a large area of Sydney's western suburbs into Port Jackson. The southern parts of the city are drained by the **Georges River** and the **Cooks River** into Botany Bay.

There is no single definition of the boundaries of Sydney. The Australian Statistical Geography Standard definition of Greater Sydney covers 12,369 km² (4,776 sq mi) and includes the local government areas of **Central Coast** in the north, **Hawkesbury** in the north-west, **Blue Mountains** in the west, **Sutherland Shire** in the south, and **Wollondilly** in the south-west.[96] The local government area of the **City of Sydney** covers about 26 square kilometres from **Garden island** in the east to Bicentennial Park in the west, and south to the suburbs of Alexandria and **Rosebery**. [97]

Geology

[[edit](#)]

Almost all of the exposed rocks around Sydney are **Sydney sandstone**.

Sydney is made up of mostly **Triassic** rock with some recent **igneous** dykes and **volcanic** necks (typically found in the **Prospect dolerite intrusion**, west of Sydney).[98] The **Sydney Basin** was formed in the early Triassic period.[99] The sand that was to become the sandstone of today was laid down between 360 and 200 million years ago. The sandstone has **shale** lenses and

fossil riverbeds.[99] The **continental shelf** of **Australia** is only 25.9 km (16.1 mi) away from the coast of Sydney, and that is where the **Tasman Abyssal Plain** lies.[100][101]

The **Sydney Basin** bioregion includes coastal features of cliffs, beaches, and estuaries. Deep river valleys known as **rias** were carved during the Triassic period in the **Hawkesbury sandstone** of the coastal region. The rising sea level between 18,000 and 6,000 years ago flooded the rias to form estuaries and deep harbours.[99] Port Jackson, better known as Sydney Harbour, is one such **ria**.^[102] Sydney features two major soil types: **sandy soils** (which originate from the Hawkesbury sandstone) and **clay** (which are from shales and **volcanic rocks**), though some soils may be a mixture of the two.^[103]

Directly overlying the older Hawkesbury sandstone is the **Wianamatta shale**, a geological feature found in western Sydney that was deposited in connection with a large **river delta** during the **Middle Triassic**. The Wianamatta shale generally comprises fine grained **sedimentary rocks** such as shales, **mudstones**, **ironstones**, **siltstones** and **laminites**, with less common sandstone units.^[104] The Wianamatta Group is made up of **Bringelly Shale**, **Minchinbury Sandstone** and **Ashfield Shale**.^[105]

Ecology

[[edit](#)]

Further information: **Ecology of Sydney**

Typical **grassy** woodland in the Sydney metropolitan area

The most prevalent **plant communities** in the Sydney region are grassy woodlands (i.e. **savannas**)^[106] and some pockets of dry **sclerophyll** forests,^[107] which consist of **eucalyptus** trees, **casuarinas**, **melaleucas**, **corymbias** and **angophoras**, with shrubs (typically **wattles**, **callistemons**, **grevilleas** and **banksias**), and a semi-continuous grass in the **understory**.^[108] The plants in this community tend to have rough, spiky leaves due to low **soil fertility**. Sydney also features a few areas of wet sclerophyll forests in the wetter, elevated areas in the **north** and **northeast**. These forests are defined by straight, tall tree **canopies** with a moist understory of soft-leaved shrubs, **tree ferns** and herbs.^[109]

The predominant vegetation community in Sydney is the **Cumberland Plain Woodland** in **Western Sydney** (**Cumberland Plain**),^[110] followed by the **Sydney Turpentine-Ironbark Forest** in the Inner West and **Northern Sydney**,^[111] the **Eastern Suburbs Banksia Scrub** in the coastline and the **Blue Gum High Forest** scantily present in the North Shore – all of which are

critically endangered.[112][113] The city also includes the [Sydney Sandstone Ridgetop Woodland](#) found in [Ku-ring-gai Chase National Park](#) on the [Hornsby Plateau](#) to the north.[114]

Sydney is home to dozens of [bird species](#),[115] which commonly include the [Australian raven](#), [Australian magpie](#), [crested pigeon](#), [noisy miner](#) and the [pied currawong](#). Introduced bird species ubiquitously found in Sydney are the [common myna](#), [common starling](#), [house sparrow](#) and the [spotted dove](#).^[116] [Reptile](#) species are also numerous and predominantly include [skinks](#).^[117]^[118] Sydney has a few [mammal](#) and [spider](#) species, such as the [grey-headed flying fox](#) and the [Sydney funnel-web](#), respectively,^[119]^[120] and has a huge diversity of [marine species](#) inhabiting its harbour and beaches.^[121]

Climate

[[edit](#)]

Main articles: [Climate of Sydney](#) and [Severe weather events in Sydney](#)

A summer storm over Sydney Harbour

Under the [Köppen–Geiger classification](#), Sydney has a [humid subtropical climate](#) (*Cfa*)^[122] with "warm, sometimes hot" summers and "generally mild",^[123]^[124]^[125] to "cool" winters.^[126] The [El Niño–Southern Oscillation](#), the [Indian Ocean Dipole](#) and the [Southern Annular Mode](#)^[127]^[128] play an important role in determining Sydney's weather patterns: [drought](#) and [bushfire](#) on the one hand, and storms and flooding on the other, associated with the opposite [phases of the oscillation in Australia](#). The weather is [moderated](#) by proximity to the ocean, and more extreme temperatures are recorded in the inland western suburbs because Sydney CBD is more affected by the [oceanic climate](#) drivers than the western suburbs.^[129]^[130]

At Sydney's primary weather station at [Observatory Hill](#), extreme temperatures have ranged from 45.8 °C (114.4 °F) on 18 [January 2013](#) to 2.1 °C (35.8 °F) on 22 June 1932.^[131]^[132]^[133] An average of 14.9 days a year have temperatures at or above 30 °C (86 °F) in the central business district (CBD).^[130] In contrast, the metropolitan area averages between 35 and 65 days, depending on the suburb.^[134] The hottest day in the metropolitan area occurred in [Penrith](#) on 4 January 2020, where a high of 48.9 °C (120.0 °F) was recorded.^[135] The average annual temperature of the sea ranges from 18.5 °C (65.3 °F) in September to 23.7 °C (74.7 °F) in February.^[136] Sydney has an average of 7.2 hours of sunshine per day^[137] and 109.5 clear days annually.^[4] Due to the inland location, [frost](#) is recorded early in the morning in [Western Sydney](#) a few times in winter. Autumn and spring are the transitional seasons, with

spring showing a larger temperature variation than autumn.[138]

Sydney experiences an **urban heat island** effect.[139] This makes certain parts of the city more vulnerable to extreme heat, including coastal suburbs.[139][140] In late spring and summer, temperatures over 35 °C (95 °F) are not uncommon,[141] though hot, dry conditions are usually ended by a **southerly buster**,[142] a powerful southerly that brings **gale** winds and a rapid fall in temperature.[143] Since Sydney is downwind of the **Great Dividing Range**, it occasionally experiences dry, westerly **foehn winds** typically in winter and early spring (which are the reason for its warm maximum temperatures).[144][145][146] Westerly winds are intense when the **Roaring Forties** (or the **Southern Annular Mode**) shift towards southeastern Australia,[147] where they may damage homes and **affect flights**, in addition to **making the temperature** seem **colder than it actually is**.[148][149]

Rainfall has a moderate to low variability and has historically been fairly uniform throughout the year, although in recent years it has been more summer-dominant and erratic.[150][151][152][153] Precipitation is usually higher in summer through to autumn,[124] and lower in late winter to early spring.[127][154][130][155] In late autumn and winter, **east coast lows** may bring large amounts of rainfall, especially in the CBD.[156] In the warm season **black nor'easters** are usually the cause of heavy rain events, though other forms of **low-pressure areas**, including remnants of **ex-cyclones**, may also bring heavy deluge and afternoon thunderstorms.[157][158] 'Snow' was last alleged in 1836, more than likely a fall of **graupel**, or soft hail; and in July 2008 the **Upper North Shore** saw a fall of graupel that was mistaken by many for 'snow'. [159] In 2009, dry conditions brought a severe **dust storm towards the city**. [160][161]

Regions

[edit]

Main article: Regions of Sydney

Sydney area at night, facing west. **Wollongong** is bottom left, and the **Central Coast** is at the far right.

The **Greater Sydney Commission** divides Sydney into three "cities" and five "districts" based on the 33 LGAs in the metropolitan area. The "metropolis of three cities" comprises *Eastern Harbour City*, *Central River City* and *Western Parkland City*.^[167] The Australian Bureau of Statistics also includes City of Central Coast (the former Gosford City and Wyong Shire) as part of Greater Sydney for population counts,^[168] adding 330,000 people.^[169]

Inner suburbs

[[edit](#)]

Historical buildings in **Millers Point**, an inner suburb north of the CBD

The **CBD** extends about 3 km (1.9 mi) south from **Sydney Cove**. It is bordered by **Farm Cove** within the **Royal Botanic Garden** to the east and **Darling Harbour** to the west. Suburbs surrounding the CBD include **Woolloomooloo** and **Potts Point** to the east, **Surry Hills** and **Darlinghurst** to the south, **Pymont** and **Ultimo** to the west, and **Millers Point** and **The Rocks** to the north. Most of these suburbs measure less than 1 km² (0.4 sq mi) in area. The Sydney CBD is characterised by narrow streets and thoroughfares, created in its convict beginnings.^[170]

Several localities, distinct from suburbs, exist throughout Sydney's inner reaches. **Central** and **Circular Quay** are transport hubs with ferry, rail, and bus interchanges. **Chinatown**, Darling Harbour, and **Kings Cross** are important locations for culture, tourism, and recreation. The **Strand Arcade**, located between **Pitt Street Mall** and **George Street**, is a historical **Victorian-style shopping arcade**. Opened on 1 April 1892, its shop fronts are an exact replica of the original internal shopping facades.^[171] **Westfield Sydney**, located beneath the **Sydney Tower**, is the largest shopping centre by area in Sydney.^[172]

Since the late 20th century, there has been a trend of **gentrification** amongst Sydney's inner suburbs. Pymont, located on the harbour, was redeveloped from a centre of shipping and international trade to an area of **high density housing**, tourist accommodation, and gambling.^[173] Originally located well outside of the city, Darlinghurst is the location of the historic **Darlinghurst Gaol**, manufacturing, and mixed housing. For a period it was known as an area of prostitution. The terrace-style housing has largely been retained and Darlinghurst has

undergone significant gentrification since the 1980s.[174][175][176]

Green Square is a former industrial area of **Waterloo** which is undergoing urban renewal worth \$8 billion. On the city harbour edge, the historic suburb and wharves of Millers Point are being built up as the new area of **Barangaroo**.^{[177][178]} The suburb of **Paddington** is known for its restored **terrace houses**, **Victoria Barracks**, and shopping including the weekly Oxford Street markets.^[179]

Inner West

[edit]

Newtown, one of the inner-most parts of the Inner West, is one of the most complete **Victorian** and **Edwardian era** commercial precincts in Australia.

The **Inner West** generally includes the **Inner West Council**, **Municipality of Burwood**, **Municipality of Strathfield**, and **City of Canada Bay**. These span up to about 11 km west of the CBD. Historically, especially prior to the building of the Harbour Bridge,^[180] the outer suburbs of the Inner West such as **Strathfield** were the location of "country" estates for the colony's elites. By contrast, the inner suburbs in the Inner West, being close to transport and industry, have historically housed working-class industrial workers. These areas have undergone gentrification in the late 20th century, and many parts are now highly valued residential suburbs.^[181] As of 2021, an Inner West suburb (Strathfield) remained one of the 20 most expensive postcodes in Australia by median house price (the others were all in metropolitan Sydney, all in Northern Sydney or the Eastern Suburbs).^[182] The **University of Sydney** is located in this area, as well as the **University of Technology, Sydney** and a campus of the **Australian Catholic University**. The Anzac Bridge spans Johnstons Bay and connects **Rozelle** to **Pymont** and the city, forming part of the **Western Distributor**.

The Inner West is today well known as the location of village commercial centres with cosmopolitan flavours, such as the "Little Italy" commercial centres of Leichardt, Five Dock and Haberfield,^[183] "Little Portugal" in Petersham,^[184] "Little Korea" in Strathfield^[185] or "Little Shanghai" in Ashfield.^[186] Large-scale shopping centres in the area include **Westfield Burwood**, **DFO Homebush** and **Birkenhead Point Outlet Centre**. There is a large cosmopolitan community and nightlife hub on **King Street, Newtown**.

The area is serviced by [Sydney Trains' T1, T2 and T3 services](#), including the [Main Suburban Line](#), which was the first to be constructed in New South Wales. [Strathfield railway station](#) is a secondary railway hub within Sydney, and major station on the Suburban and [Northern lines](#). It was constructed in 1876.^[187] The future [Sydney Metro West](#) will also connect this area with the City and Parramatta. The area is also serviced by the [Parramatta River services](#) of [Sydney Ferries](#),^[188] numerous bus routes and cycleways.^[189]

Eastern suburbs

[\[edit\]](#)

Residences in [Bellevue Hill](#). Sydney's eastern suburbs are made up of some of the most expensive real estate in the country^[190]

The Eastern Suburbs encompass the [Municipality of Woollahra](#), the [City of Randwick](#), the [Waverley Municipal Council](#), and parts of the [Bayside Council](#). They include some of the most affluent and advantaged areas in the country, with some streets being amongst the most expensive in the world. As at 2014, [Wolseley Road](#), [Point Piper](#), had a top price of \$20,900 per square metre, making it the ninth-most expensive street in the world.^[191] More than 75% of neighbourhoods in the [Electoral District of Wentworth](#) fall under the top decile of SEIFA advantage, making it the least disadvantaged area in the country.^[192] As of 2021, of the 20 most expensive postcodes in Australia by median house price, nine were in the Eastern Suburbs.^[182]

Major landmarks include [Bondi Beach](#), which was added to the [Australian National Heritage List](#) in 2008;^[193] and [Bondi Junction](#), featuring a [Westfield shopping centre](#) and an estimated office workforce of 6,400 by 2035,^[194] as well as a [railway station](#) on the [T4 Eastern Suburbs Line](#). The suburb of [Randwick](#) contains [Randwick Racecourse](#), the [Royal Hospital for Women](#), the [Prince of Wales Hospital](#), [Sydney Children's Hospital](#), and [University of New South Wales Kensington Campus](#).^[195]

Construction of the [CBD and South East Light Rail](#) was completed in April 2020.^[196] The project aims to provide reliable and high-capacity tram services to residents in the City and South-East.

Major shopping centres in the area include [Westfield Bondi Junction](#) and [Westfield Eastgardens](#).

Southern Sydney

[[edit](#)]

[Kurnell](#), [La Perouse](#), and [Cronulla](#), along with various other suburbs, face Botany Bay.

The Southern district of Sydney includes the suburbs in the [local government areas](#) of the [Georges River Council](#) (collectively known as [St George](#)) and the [Sutherland Shire](#) (colloquially known as 'The Shire'), on the southern banks of the [Georges River](#).

The [Kurnell peninsula](#), near [Botany Bay](#), is the site of the first landfall on the eastern coastline made by James Cook in 1770. [La Perouse](#), a historic suburb named after the French navigator [Jean-François de Galaup, comte de Lapérouse](#), is notable for its old military outpost at [Bare Island](#) and the [Botany Bay National Park](#).

The suburb of [Cronulla](#) in [southern Sydney](#) is close to Royal National Park, Australia's oldest national park. Hurstville, a large suburb with commercial and high-rise residential buildings dominating the skyline, has become a CBD for the southern suburbs.^[197]

Northern Sydney

[[edit](#)]

Further information: [Northern Sydney](#)

[Chatswood](#) is a major commercial district.

'[Northern Sydney](#)' includes the suburbs in the [Upper North Shore](#), [Lower North Shore](#) and the [Northern Beaches](#).

The Northern Suburbs include several landmarks – [Macquarie University](#), [Gladesville Bridge](#), [Ryde Bridge](#), [Macquarie Centre](#) and Curzon Hall in [Marsfield](#). This area includes suburbs in the local government areas of [Hornsby Shire](#), [Ku-ring-gai Council](#), [City of Ryde](#), the [Municipality of Hunter's Hill](#) and parts of the [City of Parramatta](#).

The North Shore includes the commercial centres of [North Sydney](#) and Chatswood. North Sydney itself consists of a large commercial centre, which contains the second largest concentration of high-rise buildings in Sydney after the CBD. North Sydney is dominated by advertising, marketing and associated trades, with many large corporations holding offices.

The Northern Beaches area includes [Manly](#), one of Sydney's most popular holiday destinations. The region also features [Sydney Heads](#), a series of [headlands](#) which form the entrance to Sydney Harbour. The Northern Beaches area extends south to the entrance of Port Jackson (Sydney Harbour), west to [Middle Harbour](#) and north to the entrance of [Broken Bay](#).^[198] The 2021 Australian census found the Northern Beaches to have, in comparison with the rest of Sydney, a large British diaspora and high concentration of people with European ancestry.^[199]

As of the end of 2021, half of the 20 most expensive postcodes in Australia (by median house price) were in Northern Sydney, including four on the Northern Beaches, two on the Lower North Shore, three on the Upper North Shore, and one straddling [Hunters Hill](#) and [Woolwich](#).^[182]

Hills district

[\[edit\]](#)

The [Hills district](#) generally refers to the suburbs in north-western Sydney including the local government areas of [The Hills Shire](#), parts of the [City of Parramatta Council](#) and [Hornsby Shire](#). Actual suburbs and localities that are considered to be in the Hills District can be somewhat amorphous. For example, the Hills District Historical Society restricts its definition to the Hills Shire local government area, yet its study area extends from Parramatta to the Hawkesbury. The region is so named for its characteristically comparatively hilly topography as the Cumberland Plain lifts up, joining the Hornsby Plateau. [Windsor](#) and [Old Windsor Roads](#) are the second and third roads, respectively, laid in Australia.^[200]

On 26 May 2019, The [Sydney Metro Northwest](#), which went from Chatswood to Tallawong, opened, with a large portion running through the Hills District, which meant the Hills District, for the first time, started having heavy rail.^[201] Before this, The Hills was served by [Bus Rapid Transit](#).

Western suburbs

[\[edit\]](#)

Further information: [Greater Western Sydney](#)

[Parramatta](#), a major commercial centre of [Greater Western Sydney](#), is often referred to as Sydney's "second [CBD](#)"

The greater western suburbs encompasses the areas of Parramatta, the sixth largest business district in Australia, settled the same year as the harbour-side colony,[202] [Bankstown](#), [Liverpool](#), [Penrith](#), and [Fairfield](#). Covering 5,800 km² (2,200 sq mi) and having an estimated population as at 2017 of 2,288,554, western Sydney has the most [multicultural suburbs](#) in the country – [Cabramatta](#) has earned the nickname "[Little Saigon](#)" due to its [Vietnamese](#) population, [Fairfield](#) has been named "[Little Assyria](#)" for its predominant [Assyrian](#) population and [Harris Park](#) is known as "[Little India](#)" with its plurality of [Indian](#) and [Hindu population](#).[203][204][205][206] The population is predominantly of a [working class](#) background, with major employment in the [heavy industries](#) and [vocational](#) trade.[207] [Toongabbie](#) is noted for being the third mainland settlement (after Sydney and Parramatta) set up after British colonisation began in 1788, although the site of the settlement is actually in the separate suburb of [Old Toongabbie](#).[208]

The western suburb of [Prospect](#), in the [City of Blacktown](#), is home to [Raging Waters](#), a [water park](#) operated by [Parques Reunidos](#).[209] [Auburn Botanic Gardens](#), a botanical garden in [Auburn](#), attracts thousands of visitors each year, including many from outside Australia.[210] The greater west also includes [Sydney Olympic Park](#), a suburb created to host the 2000 Summer Olympics, and [Sydney Motorsport Park](#), a [circuit](#) in [Eastern Creek](#).[211] [Prospect Hill](#), a historically significant ridge in the west and the only area in Sydney with ancient [volcanic activity](#),[212] is also listed on the State Heritage Register.[213]

To the northwest, [Featherdale Wildlife Park](#), a zoo in [Doonside](#), near [Blacktown](#), is a major [tourist attraction](#).[214] [Sydney Zoo](#), opened in 2019, is another prominent zoo situated in [Bungaribee](#).[215] Established in 1799, the [Old Government House](#), a [historic house museum](#) and [tourist spot](#) in Parramatta, was included in the [Australian National Heritage List](#) on 1 August 2007 and [World Heritage List](#) in 2010 (as part of the 11 penal sites constituting the [Australian Convict Sites](#)), making it the only site in greater western Sydney to be featured in such lists.[216] The house is Australia's oldest surviving public building.[217]

Further to the southwest is the region of Macarthur and the city of [Campbelltown](#), a significant population centre until the 1990s considered a region separate to Sydney proper. [Macarthur Square](#), a shopping complex in Campbelltown, has become one of the largest shopping complexes in Sydney.[218] The southwest also features [Bankstown Reservoir](#), the oldest

elevated reservoir constructed in **reinforced concrete** that is still in use and is listed on the State Heritage Register.^[219] The southwest is home to one of Sydney's oldest trees, the **Bland Oak**, which was planted in the 1840s by **William Bland** in **Carramar**.^[220]

Urban structure

[\[edit\]](#)

Image not found or type unknown

The **Sydney CBD** with the **Opera House** and **Harbour Bridge**. Sydney is home to the most high-rise buildings in the nation.^[221]

Architecture

[\[edit\]](#)

See also: **Architecture of Sydney**, **List of heritage houses in Sydney**, and **List of tallest buildings in Sydney**

The earliest structures in the colony were built to the bare minimum of standards. Governor Macquarie set ambitious targets for the design of new construction projects. The city now has a world heritage listed building, several national heritage listed buildings, and dozens of Commonwealth heritage listed buildings as evidence of the survival of Macquarie's ideals.^[222]^[223]^[224]

Image not found or type unknown

York Street is an example of a city street in Sydney with an array of intact Victorian heritage architecture.

In 1814, the Governor called on a convict named **Francis Greenway** to design **Macquarie Lighthouse**.^[225] The lighthouse's **Classical** design earned Greenway a pardon from Macquarie in 1818 and introduced a culture of refined architecture that remains to this day.^[226] Greenway went on to design the **Hyde Park Barracks** in 1819 and the **Georgian** style **St James's Church** in 1824.^{[227][228]} **Gothic-inspired architecture** became more popular from the 1830s. **John Verge's Elizabeth Bay House** and **St Philip's Church** of 1856 were built in **Gothic Revival** style along with **Edward Blore's Government House** of 1845.^{[229][230]} **Kirribilli House**, completed in 1858, and **St Andrew's Cathedral**, Australia's oldest cathedral,^[231] are rare examples of **Victorian Gothic** construction.^{[229][232]}

General Post Office

From the late 1850s there was a shift towards Classical architecture. **Mortimer Lewis** designed the **Australian Museum** in 1857.^[233] The **General Post Office**, completed in 1891 in **Victorian Free Classical** style, was designed by **James Barnet**.^[234] Barnet also oversaw the 1883 reconstruction of Greenway's Macquarie Lighthouse.^{[225][226]} **Customs House** was built in 1844.^[235] The neo-Classical and **French Second Empire** style **Town Hall** was completed in 1889.^{[236][237]} **Romanesque** designs gained favour from the early 1890s. **Sydney Technical College** was completed in 1893 using both Romanesque Revival and **Queen Anne** approaches.^[238] The **Queen Victoria Building** was designed in Romanesque Revival fashion by **George McRae**; completed in 1898,^[239] it accommodates 200 shops across its three storeys.^[240]

As the wealth of the settlement increased and Sydney developed into a metropolis after Federation in 1901, its buildings became taller. Sydney's first tower was Culwulla Chambers which topped out at 50 m (160 ft) making 12 floors. The Commercial Traveller's Club, built in 1908, was of similar height at 10 floors. It was built in a brick stone veneer and demolished in 1972.^[241] This heralded a change in Sydney's cityscape and with the lifting of height restrictions in the 1960s there came a surge of high-rise construction.^[242]

The Great Depression had a tangible influence on Sydney's architecture. New structures became more restrained with far less ornamentation. The most notable architectural feat of this period is the Harbour Bridge. Its steel arch was designed by **John Bradfield** and completed in 1932. A total of 39,000 tonnes of structural steel span the 503 m (1,650 ft) between Milsons Point and **Dawes Point**.^{[243][244]}

Frank Gehry's Dr Chau Chak Wing Building

Modern and International architecture came to Sydney from the 1940s. Since its completion in 1973 the city's Opera House has become a World Heritage Site and one of the world's most renowned pieces of Modern design. Jørn Utzon was awarded the Pritzker Prize in 2003 for his work on the Opera House.[245] Sydney is home to Australia's first building by renowned Canadian-American architect Frank Gehry, the Dr Chau Chak Wing Building (2015). An entrance from The Goods Line—a pedestrian pathway and former railway line—is located on the eastern border of the site.

Contemporary buildings in the CBD include Citigroup Centre,[246] Aurora Place,[247] Chifley Tower,[248][249] the Reserve Bank building,[250] Deutsche Bank Place,[251] MLC Centre,[252] and Capita Centre.[253] The tallest structure is Sydney Tower, designed by Donald Crone and completed in 1981.[254] Due to the proximity of Sydney Airport, a maximum height restriction was imposed, now sitting at 330 metres (1083 feet).[255] Green bans and heritage overlays have been in place since at least 1977 to protect Sydney's heritage after controversial demolitions in the 1970s.[256]

Housing

[edit]

Terraces in Kirribilli

Sydney surpasses both New York City and Paris real estate prices, having some of the most expensive in the world.[257][258] The city remains Australia's most expensive housing market, with the median house price at \$1,595,310 as of December 2023[259]

There were 1.83 million dwellings in Sydney in 2021 including 900,000 (54%) detached houses, 218,000 (13%) semi-detached terrace houses and 550,000 (33%) units and apartments.[260] Whilst terrace houses are common in the inner city areas, detached houses dominate the landscape in the outer suburbs. Due to environmental and economic pressures, there has been a noted trend towards denser housing, with a 30% increase in the number of apartments between 1996 and 2006.[261] Public housing in Sydney is managed by the Government of New South Wales.[262] Suburbs with large concentrations of public housing include Claymore, Macquarie Fields, Waterloo, and Mount Druitt.

A range of heritage housing styles can be found throughout Sydney. Terrace houses are found in the inner suburbs such as [Paddington](#), [The Rocks](#), [Potts Point](#) and [Balmain](#), many of which have been the subject of [gentrification](#).^{[263][264]} These terraces, particularly those in suburbs such as The Rocks, were historically home to Sydney's miners and labourers. In the present day, terrace houses now make up some of the most valuable real estate in the city.^[265] Surviving large mansions from the Victorian era are mostly found in the oldest suburbs, such as [Double Bay](#), [Darling Point](#), [Rose Bay](#) and [Strathfield](#).^[266]

[Federation](#) homes, constructed around the time of Federation in 1901, are located in a large number of suburbs that developed thanks to the arrival of railways in the late 19th century, such as [Penshurst](#) and [Turramurra](#), and in large-scale planned "garden suburbs" such as [Haberfield](#). Workers cottages are found in [Surry Hills](#), [Redfern](#), and [Balmain](#). [California bungalows](#) are common in [Ashfield](#), [Concord](#), and [Beecroft](#). Larger modern homes are predominantly found in the outer suburbs, such as [Stanhope Gardens](#), [Kellyville Ridge](#), [Bella Vista](#) to the northwest, [Bossley Park](#), [Abbotsbury](#), and [Cecil Hills](#) to the west, and [Hoxton Park](#), [Harrington Park](#), and [Oran Park](#) to the southwest.^[267]

Parks and open spaces

[\[edit\]](#)

Main article: [Parks in Sydney](#)

The [Anzac War Memorial](#) in [Hyde Park](#) is a public memorial dedicated to the [Australian Imperial Force](#) of [World War I](#).

The [Royal Botanic Garden](#) is the most iconic green space in the region, hosting both scientific and leisure activities.^[268] There are 15 separate parks under the City administration.^[269] Parks within the city centre include [Hyde Park](#), [The Domain](#) and [Prince Alfred Park](#).

The [Centennial Parklands](#) is the largest park in the City of Sydney, comprising 189 ha (470 acres).^[270]

The [Centennial Parklands](#) is the largest park in the City of Sydney, comprising 189 ha (470 acres).

The inner suburbs include [Centennial Park](#) and [Moore Park](#) in the east (both within the City of Sydney local government area), while the outer suburbs contain [Sydney Park](#) and [Royal National Park](#) in the south, [Ku-ring-gai Chase National Park](#) in the north, and [Western Sydney Parklands](#) in the west, which is [one of the largest urban parks](#) in the world. The [Royal National](#)

Park was proclaimed in 1879 and with 13,200 ha (51 sq mi) is the second oldest national park in the world.[271]

The **Anzac War Memorial** in **Hyde Park** is a public memorial dedicated to the achievement of the **Australian Imperial Force** of **World War I**. [272]

Hyde Park is the oldest parkland in the country. [273] The largest park in the Sydney metropolitan area is Ku-ring-gai Chase National Park, established in 1894 with an area of 15,400 ha (59 sq mi). [274] It is regarded for its well-preserved records of indigenous habitation – more than 800 rock engravings, cave drawings and middens. [275]

The area now known as The Domain was set aside by Governor Arthur Phillip in 1788 as his private reserve. [276] Under the orders of Macquarie the land to the immediate north of The Domain became the Royal Botanic Garden in 1816. This makes them the oldest botanic garden in Australia. [276] The Gardens host scientific research with herbarium collections, a library and laboratories. [277] The two parks have a total area of 64 ha (0.2 sq mi) with 8,900 individual plant species and receive over 3.5 million annual visits. [278]

To the south of The Domain is Hyde Park, the oldest public parkland in Australia which measures 16.2 ha (0.1 sq mi). [279] Its location was used for both relaxation and **grazing** of animals from the earliest days of the colony. [280] Macquarie dedicated it in 1810 for the "recreation and amusement of the inhabitants of the town" and named it in honour of **Hyde Park** in **London**.

Economy

[edit]

Main article: **Economy of Sydney**

The **central business district**. Sydney is the financial and economic centre of Australia, having the largest economy and contributing a quarter of Australia's total

GDP.[281]

Researchers from [Loughborough University](#) have ranked Sydney amongst the top ten world cities that are highly integrated into the global economy.[282] The Global Economic Power Index ranks Sydney eleventh in the world.[283] The Global Cities Index recognises it as fourteenth in the world based on global engagement.[284] There is a significant concentration of foreign banks and multinational corporations in Sydney and the city is promoted as Australia's financial capital and one of [Asia Pacific](#)'s leading financial hubs.[285][286]

The prevailing economic theory during early colonial days was [mercantilism](#), as it was throughout most of Western Europe.[287] The economy struggled at first due to difficulties in cultivating the land and the lack of a stable monetary system. Governor Macquarie created [two coins](#) from every [Spanish silver dollar](#) in circulation.[287] The economy was [capitalist](#) in nature by the 1840s as the proportion of free settlers increased, the maritime and wool industries flourished, and the powers of the [East India Company](#) were curtailed.[287]

Wheat, gold, and other minerals became export industries towards the end of the 1800s.[287] Significant capital began to flow into the city from the 1870s to finance roads, railways, bridges, docks, courthouses, schools and hospitals. [Protectionist](#) policies after [federation](#) allowed for the creation of a manufacturing industry which became the city's largest employer by the 1920s.[287] These same policies helped to relieve the effects of the Great Depression during which the unemployment rate in New South Wales reached as high as 32%.[287] From the 1960s onwards Parramatta gained recognition as the city's second CBD and finance and tourism became major industries and sources of employment.[287]

Sydney's nominal gross domestic product was AU\$400.9 billion and AU\$80,000 per capita[288] in 2015.[289][286] Its gross domestic product was AU\$337 billion in 2013, the largest in Australia.[289] The financial and insurance services industry accounts for 18.1% of gross product, ahead of professional services with 9% and manufacturing with 7.2%. The creative and technology sectors are also focus industries for the City of Sydney and represented 9% and 11% of its economic output in 2012.[290][291]

Businesses

[\[edit\]](#)

There were 451,000 businesses based in Sydney in 2011, including 48% of the top 500 companies in Australia and two-thirds of the regional headquarters of multinational corporations.[292] Global companies are attracted to the city in part because its time zone spans the closing of business in North America and the opening of business in Europe. Most foreign companies in Sydney maintain significant sales and service functions but comparably less production, research, and development capabilities.[293] There are 283 multinational companies with regional offices in Sydney.[294]

Domestic economics

[edit]

Pitt Street, a major street in the **CBD**, runs from **Circular Quay** in the north to **Waterloo** in the south, and is home to many large high-end retailers.[295]

Sydney has been ranked between the fifteenth and the fifth most expensive city in the world and is the most expensive city in Australia.[296] Of the 15 categories only measured by UBS in 2012, workers receive the seventh highest wage levels of 77 cities in the world.[296] Working residents of Sydney work an average of 1,846 hours per annum with 15 days of leave.[296]

The labour force of Greater Sydney Region in 2016 was 2,272,722 with a participation rate of 61.6%.[297] It comprised 61.2% full-time workers, 30.9% part-time workers, and 6.0% unemployed individuals.[260][298] The largest reported occupations are professionals, clerical and administrative workers, managers, technicians and trades workers, and community and personal service workers.[260] The largest industries by employment across Greater Sydney are Health Care and Social Assistance (11.6%), Professional Services (9.8%), Retail Trade (9.3%), Construction (8.2%), Education and Training (8.0%), Accommodation and Food Services (6.7%), and Financial and Insurance Services (6.6%).[2] The Professional Services and Financial and Insurance Services industries account for 25.4% of employment within the City of Sydney.[299]

In 2016, 57.6% of working-age residents had a weekly income of less than \$1,000 and 14.4% had a weekly income of \$1,750 or more.[300] The median weekly income for the same period was \$719 for individuals, \$1,988 for families, and \$1,750 for households.[301]

Unemployment in the City of Sydney averaged 4.6% for the decade to 2013, much lower than the current rate of unemployment in Western Sydney of 7.3%.[286][302] Western Sydney continues to struggle to create jobs to meet its population growth despite the development of commercial centres like Parramatta. Each day about 200,000 commuters travel from Western Sydney to the CBD and suburbs in the east and north of the city.[302]

Home ownership in Sydney was less common than renting prior to the Second World War but this trend has since reversed.[261] Median house prices have increased by an average of 8.6% per annum since 1970.[303][304] The median house price in March 2014 was \$630,000.[305]

The primary cause of rising prices is the increasing cost of land and scarcity.[306] 31.6% of dwellings in Sydney are rented, 30.4% are owned outright and 34.8% are owned with a mortgage.[260] 11.8% of mortgagees in 2011 had monthly loan repayments of less than \$1,000 and 82.9% had monthly repayments of \$1,000 or more.[2] 44.9% of renters for the same period had weekly rent of less than \$350 whilst 51.7% had weekly rent of \$350 or more. The median weekly rent in Sydney in 2011 was \$450.[2]

Financial services

[edit]

State Savings Bank

Macquarie gave a charter in 1817 to form the first bank in Australia, the **Bank of New South Wales**. [307] New private banks opened throughout the 1800s but the financial system was unstable. Bank collapses were frequent and a crisis point was reached in 1893 when 12 banks failed. [307]

The Bank of New South Wales exists to this day as **Westpac**. [308] The Commonwealth Bank of Australia was formed in Sydney in 1911 and began to issue notes backed by the resources of the nation. It was replaced in this role in 1959 by the **Reserve Bank of Australia**, also based in Sydney. [307] The **Australian Securities Exchange** began operating in 1987 and with a market capitalisation of \$1.6 trillion is now one of the ten largest exchanges in the world. [309]

The Financial and Insurance Services industry now constitutes 43% of the economic product of the City of Sydney. [285] Sydney makes up half of Australia's finance sector and has been promoted by consecutive Commonwealth Governments as **Asia Pacific**'s leading financial centre. [20][21][310] In the 2017 **Global Financial Centres Index**, Sydney was ranked as having the eighth most competitive financial centre in the world. [311]

In 1985 the Federal Government granted 16 banking licences to foreign banks and now 40 of the 43 foreign banks operating in Australia are based in Sydney, including the **People's Bank of China**, **Bank of America**, **Citigroup**, **UBS**, **Mizuho Bank**, **Bank of China**, **Banco Santander**,

Credit Suisse, Standard Chartered, State Street, HSBC, Deutsche Bank, Barclays, Royal Bank of Canada, Société Générale, Royal Bank of Scotland, Sumitomo Mitsui, ING Group, BNP Paribas, and Investec.[285][307][312][313]

Manufacturing

[edit]

Main article: [Manufacturing in Australia](#)

Sydney has been a manufacturing city since the 1920s. By 1961 the industry accounted for 39% of all employment and by 1970 over 30% of all Australian manufacturing jobs were in Sydney.[314] Its status has declined in recent decades, making up 12.6% of employment in 2001 and 8.5% in 2011.[2][314] Between 1970 and 1985 there was a loss of 180,000 manufacturing jobs.[314] Despite this, Sydney still overtook Melbourne as the largest manufacturing centre in Australia in the 2010s,[315] with a manufacturing output of \$21.7 billion in 2013.[316] Observers have credited Sydney's focus on the domestic market and high-tech manufacturing for its resilience against the high [Australian dollar](#) of the early 2010s.[316] The *Smithfield-Wetherill Park Industrial Estate* in [Western Sydney](#) is the largest [industrial estate](#) in the Southern Hemisphere and is the centre of manufacturing and distribution in the region.[317]

Tourism and international education

[edit]

Main article: [Tourism in Sydney](#)

[Darling Harbour](#) is a major entertainment and tourism precinct.

Sydney is a gateway to Australia for many international visitors and ranks among the top sixty most visited cities in the world.[318] It has hosted over 2.8 million international visitors in 2013, or nearly half of all international visits to Australia. These visitors spent 59 million nights in the city and a total of \$5.9 billion.[24] The countries of origin in descending order were China, New Zealand, the United Kingdom, the United States, South Korea, Japan, Singapore, Germany, Hong Kong, and India.[319]

The city also received 8.3 million domestic overnight visitors in 2013 who spent a total of \$6 billion.[319] 26,700 workers in the City of Sydney were directly employed by tourism in 2011.[320] There were 480,000 visitors and 27,500 people staying overnight each day in 2012.[320] On average, the tourism industry contributes \$36 million to the city's economy per day.[320]

Popular destinations include the Sydney Opera House, the Sydney Harbour Bridge, [Watsons Bay](#), [The Rocks](#), Sydney Tower, [Darling Harbour](#), the Royal Botanic Garden, the [Australian Museum](#), the [Museum of Contemporary Art](#), the [Art Gallery of New South Wales](#), the [Queen Victoria Building](#), [Sea Life Sydney Aquarium](#), [Taronga Zoo](#), [Bondi Beach](#), [Luna Park](#) and [Sydney Olympic Park](#).^[321]

Major developmental projects designed to increase Sydney's tourism sector include a [casino and hotel](#) at Barangaroo and the redevelopment of [East Darling Harbour](#), which involves a new [exhibition and convention centre](#), now Australia's largest.^{[322][323][324]}

Sydney is the highest-ranking city in the world for international students. More than 50,000 international students study at the city's universities and a further 50,000 study at its [vocational and English language schools](#).^{[284][325]} International education contributes \$1.6 billion to the local economy and creates demand for 4,000 local jobs each year.^[326]

Housing affordability

[\[edit\]](#)

In 2023, Sydney was ranked the least affordable city to buy a house in Australia and the second least affordable city in the world, after Hong Kong,^[327] with the average Sydney house price in late 2023 costing A\$1.59 million, and the average unit price costing A\$795,000.^[328] As of early 2024, Sydney is often described in the media as having a housing shortage, or suffering a housing crisis.^{[329][330]}

Demographics

[\[edit\]](#)

Main article: [Demographics of Sydney](#)

[Chinese New Year](#) celebrations in [Chinatown](#). Sydney is home to the nation's largest population of [Chinese Australians](#).^[331]

The population of Sydney in 1788 was less than 1,000.^[332] With convict transportation it almost tripled in ten years to 2,953.^[333] For each decade since 1961 the population has increased by more than 250,000.^[334] The 2021 census recorded the population of Greater Sydney as 5,231,150.^[1] The Australian Treasury expects the population will grow to 6.5 million

in 2033–34.[335] The four most densely populated suburbs in Australia are located in Sydney with each having more than 13,000 residents per square kilometre (33,700 residents per square mile).[336] Between 1971 and 2018, Sydney experienced a net loss of 716,832 people to the rest of Australia, but its population grew due to overseas arrivals and a healthy birth rate.[337]

The median age of Sydney residents is 37 and 14.8% of people are 65 or older.[260] 48.6% of Sydney's population is married whilst 36.7% have never been married.[260] 49.0% of families are couples with children, 34.4% are couples without children, and 14.8% are single-parent families.[260]

Ancestry and immigration

[edit]

Country of birth (2021)[11]

At the 2021 census, the most common ancestries were:[11]

- English (21.8%)
- Australian (20.4%)[N 2]
- Chinese (11.6%)
- Irish (7.2%)
- Scottish (5.6%)
- Indian (4.9%)
- Italian (4.3%)
- Lebanese (3.5%)
- Filipino (2.7%)
- Greek (2.6%)
- Vietnamese (2.5%)
- German (2.2%)
- Korean (1.4%)
- Nepalese (1.4%)
- Australian Aboriginal (1.4%)[339]
- Maltese (1.1%)

At the 2021 census, 40.5% of Sydney's population was born overseas. Foreign countries of birth with the greatest representation are mainland China, India, England, Vietnam, Philippines and New Zealand.[11]

Birthplace[N 1] Population

Australia	2,970,737
Mainland China	238,316
India	187,810
England	153,052
Vietnam	93,778
Philippines	91,339
New Zealand	85,493
Lebanon	61,620
Nepal	59,055
Iraq	52,604
South Korea	50,702
Hong Kong SAR	46,182
South Africa	39,564
Italy	38,762
Indonesia	35,413
Malaysia	35,002
Fiji	34,197
Pakistan	31,025

At the 2021 census, 1.7% of Sydney's population identified as being Indigenous — Aboriginal Australians and Torres Strait Islanders.[N 3][340]

Language

[[edit](#)]

42% of households in Sydney use a language other than English, with the most common being Mandarin (5%), Arabic (4.2%), Cantonese (2.8%), Vietnamese (2.2%) and [Hindi](#) (1.5%).^[340]

Religion

[[edit](#)]

[St Mary's Cathedral](#) is the [cathedral](#) church of the [Roman Catholic Archdiocese of Sydney](#).

In 2021, [Christianity](#) was the largest religious affiliation at 46%, the largest denominations of which were [Catholicism](#) at 23.1% and [Anglicanism](#) at 9.2%. 30.3% of Sydney residents identified as having no religion. The most common non-Christian religious affiliations were [Islam](#) (6.3%), [Hinduism](#) (4.8%), [Buddhism](#) (3.8%), [Sikhism](#) (0.7%), and [Judaism](#) (0.7%). About 500 people identified with traditional Aboriginal religions.^[11]

The [Church of England](#) was the only recognised church before Governor Macquarie appointed official Catholic chaplains in 1820.^[341] Macquarie also ordered the construction of [churches](#) such as St Matthew's, St Luke's, St James's, and St Andrew's. Religious groups, alongside secular institutions, have played a significant role in education, health and charitable services throughout Sydney's history.^[342]

Crime

[[edit](#)]

Main article: [Crime in Sydney](#)

Crime in Sydney is low, with [The Independent](#) ranking Sydney as the fifth safest city in the world in 2019.^[343] However, drug use is a significant problem. Methamphetamine is heavily consumed compared to other countries, while heroin is less common.^[344] One of the biggest crime-related issues in recent times was the introduction of [lockout laws](#) in February 2014,^[345]

in an attempt to curb alcohol-fuelled violence. Patrons could not enter clubs or bars in the inner-city after 1:30am, and last drinks were called at 3am. The lockout laws were removed in January 2020.[346]

Culture

[[edit](#)]

Main article: [Culture of Sydney](#)

Science, art, and history

[[edit](#)]

The [Art Gallery of New South Wales](#), located in [The Domain](#), is the fourth largest public gallery in Australia.

[Ku-ring-gai Chase National Park](#) is rich in [Indigenous Australian](#) heritage, containing around 1,500 pieces of [Aboriginal rock art](#) – the largest cluster of Indigenous sites in Australia. The park's indigenous sites include [petroglyphs](#), art sites, [burial sites](#), [caves](#), marriage areas, birthing areas, [midden](#) sites, and tool manufacturing locations, which are dated to be around 5,000 years old. The inhabitants of the area were the [Garigal](#) people.[347][348] Other [rock art sites](#) exist in the Sydney region, such as in [Terrey Hills](#) and [Bondi](#), although the locations of most are not publicised to prevent damage by vandalism, and to retain their quality, as they are still regarded as sacred sites by Indigenous Australians.[349]

The [State Library of New South Wales](#) holds the oldest library collections in Australia.

The [Australian Museum](#) opened in Sydney in 1827 with the purpose of collecting and displaying the natural wealth of the colony.[350] It remains Australia's oldest natural history museum. In 1995 the [Museum of Sydney](#) opened on the site of the first [Government House](#). It recounts the story of the city's development.[351] Other museums include the [Powerhouse Museum](#) and the [Australian National Maritime Museum](#).[352][353]

The [State Library of New South Wales](#) holds the oldest library collections in Australia, being established as the [Australian Subscription Library](#) in 1826.[354] The [Royal Society of New South Wales](#), formed in 1866, encourages "studies and investigations in science, art, literature, and philosophy". It is based in a terrace house in [Darlington](#) owned by the [University of Sydney](#) .[355] The [Sydney Observatory](#) building was constructed in 1859 and used for astronomy and meteorology research until 1982 before being converted into a museum.[356]

The [Museum of Contemporary Art](#) was opened in 1991 and occupies an [Art Deco](#) building in [Circular Quay](#). Its collection was founded in the 1940s by artist and art collector John Power and has been maintained by the University of Sydney.[357] Sydney's other significant art institution is the [Art Gallery of New South Wales](#) which coordinates the [Archibald Prize](#) for portraiture.[358] Sydney is also home to contemporary art gallery [Artspace](#), housed in the historic [Gunnery Building](#) in [Woolloomooloo](#), fronting [Sydney Harbour](#).[359]

Entertainment

[edit]

The [State Theatre](#) on [Market Street](#) was opened in 1929.

Sydney's first commercial theatre opened in 1832 and nine more had commenced performances by the late 1920s. The live medium lost much of its popularity to the cinema during the Great Depression before experiencing a revival after World War II.[360] Prominent theatres in the city today include [State Theatre](#), [Theatre Royal](#), [Sydney Theatre](#), [The Wharf Theatre](#), and [Capitol Theatre](#). [Sydney Theatre Company](#) maintains a roster of local, classical, and international plays. It occasionally features Australian theatre icons such as [David Williamson](#), [Hugo Weaving](#), and [Geoffrey Rush](#). The city's other prominent theatre companies are [New Theatre](#), [Belvoir](#), and [Griffin Theatre Company](#). Sydney is also home to [Event Cinemas](#)' first theatre, which opened on [George St](#) in 1913, under its former Greater Union brand; the theatre currently operates, and is regarded as one of Australia's busiest cinema locations.

The Sydney Opera House is the home of [Opera Australia](#) and [Sydney Symphony](#). It has staged over 100,000 performances and received 100 million visitors since opening in 1973.[245] Two other important performance venues in Sydney are [Town Hall](#) and the [City Recital Hall](#). The [Sydney Conservatorium of Music](#) is located adjacent to the Royal Botanic Garden and serves the Australian music community through education and its biannual [Australian Music Examinations Board](#) exams.[361]

A concert at the [Sydney Opera House](#)

Many writers have originated in and set their work in Sydney. Others have visited the city and commented on it. Some of them are commemorated in the [Sydney Writers Walk](#) at Circular Quay. The city was the headquarters for Australia's first published newspaper, the [Sydney Gazette](#). [362] Watkin Tench's *A Narrative of the Expedition to Botany Bay* (1789) and *A Complete Account of the Settlement at Port Jackson in New South Wales* (1793) have remained the best-known accounts of life in early Sydney. [363] Since the infancy of the establishment, much of the literature set in Sydney were concerned with life in the city's slums and working-class communities, notably [William Lane's](#) *The Working Man's Paradise* (1892), [Christina Stead's](#) *Seven Poor Men of Sydney* (1934) and [Ruth Park's](#) *The Harp in the South* (1948). [364] The first Australian-born female novelist, [Louisa Atkinson](#), set several novels in Sydney. [365] Contemporary writers, such as [Elizabeth Harrower](#), were born in the city and set most of their work there—Harrower's debut novel *Down in the City* (1957) was mostly set in a [King's Cross](#) apartment. [366][367][368] Well known contemporary novels set in the city include [Melina Marchetta's](#) *Looking for Alibrandi* (1992), [Peter Carey's](#) *30 Days in Sydney: A Wildly Distorted Account* (1999), [J. M. Coetzee's](#) *Diary of a Bad Year* (2007) and [Kate Grenville's](#) *The Secret River* (2010). The [Sydney Writers' Festival](#) is held annually between April and May. [369]

Filmmaking in Sydney was prolific until the 1920s when spoken films were introduced and American productions gained dominance. [370] The [Australian New Wave](#) saw a resurgence in film production, with many notable features shot in the city between the 1970s and 80s, helmed by directors such as [Bruce Beresford](#), [Peter Weir](#) and [Gillian Armstrong](#). [371] [Fox Studios Australia](#) commenced production in Sydney in 1998. Successful films shot in Sydney since then include *The Matrix*, *Lantana*, *Mission: Impossible 2*, *Moulin Rouge!*, *Star Wars: Episode II – Attack of the Clones*, *Australia*, *Superman Returns*, *The Great Gatsby* and *Anyone but You*. The [National Institute of Dramatic Art](#) is based in Sydney and has several famous alumni such as [Mel Gibson](#), [Judy Davis](#), [Baz Luhrmann](#), [Cate Blanchett](#), [Hugo Weaving](#) and [Jacqueline Mckenzie](#). [372]

Sydney hosts several festivals throughout the year. The city's **New Year's Eve** celebrations are the largest in Australia.[373] The **Royal Easter Show** is held every year at Sydney Olympic Park. **Sydney Festival** is Australia's largest arts festival.[374] The travelling rock music festival **Big Day Out** originated in Sydney. The city's two largest film festivals are **Sydney Film Festival** and **Tropfest**. **Vivid Sydney** is an annual outdoor exhibition of art installations, light projections, and music. In 2015, Sydney was ranked the 13th top **fashion capital** in the world.[375] It hosts the **Australian Fashion Week** in autumn. **Sydney Mardi Gras** has commenced each February since 1979.

Sydney's **Chinatown** has had numerous locations since the 1850s. It moved from **George Street** to Campbell Street to its current setting in Dixon Street in 1980.[376] Little Italy is located in Stanley Street.[287]

Restaurants, bars and nightclubs can be found in the entertainment hubs in the Sydney CBD (**Darling Harbour**, **Barangaroo**, **The Rocks** and **George Street**), **Oxford Street**, **Surry Hills**, **Newtown** and **Parramatta**.[377][378] **Kings Cross** was previously considered the red-light district. **The Star** is the city's casino and is situated next to **Darling Harbour** while the new **Crown Sydney** resort is in nearby **Barangaroo**.[379]

Media

[[edit](#)]

Main article: **Media in Sydney**

Australia's national broadcaster, the **ABC**, is headquartered in **Ultimo**.

The **Sydney Morning Herald** is Australia's oldest newspaper still in print; it has been published continuously since 1831.[380] Its competitor is **The Daily Telegraph**, in print since 1879.[381] Both papers have Sunday tabloid editions called **The Sun-Herald** and **The Sunday Telegraph** respectively. **The Bulletin** was founded in Sydney in 1880 and became Australia's longest running magazine. It closed after 128 years of continuous publication.[382] Sydney heralded Australia's first newspaper, the **Sydney Gazette**, published until 1842.

Each of Australia's three commercial television networks and two public broadcasters is headquartered in Sydney. **Nine's** offices and news studios are in **North Sydney**, **Ten** is based in

Pymont, and Seven is based in South Eveleigh in Redfern.[383][384][385][386] The Australian Broadcasting Corporation is located in Ultimo,[387] and the Special Broadcasting Service is based in Artarmon.[388] Multiple digital channels have been provided by all five networks since 2000. Foxtel is based in North Ryde and sells subscription cable television to most of the urban area.[389] Sydney's first radio stations commenced broadcasting in the 1920s. Radio has managed to survive despite the introduction of television and the Internet.[390] 2UE was founded in 1925 and under the ownership of Nine Entertainment is the oldest station still broadcasting.[390] Competing stations include the more popular 2GB, ABC Radio Sydney, KIIS 106.5, Triple M, Nova 96.9 and 2Day FM.[391]

Sport and outdoor activities

[edit]

Main article: Sport in Sydney

Sydney's earliest migrants brought with them a passion for sport but were restricted by the lack of facilities and equipment. The first organised sports were boxing, wrestling, and horse racing from 1810 in Hyde Park.[392] Horse racing remains popular and events such as the Golden Slipper Stakes attract widespread attention. The first cricket club was formed in 1826 and matches were played within Hyde Park throughout the 1830s and 1840s.[392] Cricket is a favoured sport in summer and big matches have been held at the Sydney Cricket Ground since 1878. The New South Wales Blues compete in the Sheffield Shield league and the Sydney Sixers and Sydney Thunder contest the national Big Bash Twenty20 competition.

First played in Sydney in 1865, rugby grew to be the city's most popular football code by the 1880s. One-tenth of the state's population attended a New South Wales versus New Zealand rugby match in 1907.[392] Rugby league separated from rugby union in 1908. The New South Wales Waratahs contest the Super Rugby competition, while the Sydney Rays represent the city in the National Rugby Championship. The national Wallabies rugby union team competes in Sydney in international matches such as the Bledisloe Cup, Rugby Championship, and World Cup. Sydney is home to nine of the seventeen teams in the National Rugby League competition: Canterbury-Bankstown Bulldogs, Cronulla-Sutherland Sharks, Manly-Warringah Sea Eagles, Penrith Panthers, Parramatta Eels, South Sydney Rabbitohs, St George Illawarra Dragons, Sydney Roosters, and Wests Tigers. New South Wales contests the annual State of Origin series against Queensland.

Sydney FC and the Western Sydney Wanderers compete in the A-League Men and A-League Women competitions. The Sydney Swans and Greater Western Sydney Giants are local Australian rules football clubs that play in the Australian Football League and the AFL Women's. The Sydney Kings compete in the National Basketball League. The Sydney Uni Flames play in the Women's National Basketball League. The Sydney Blue Sox contest the Australian Baseball League. The NSW Pride are a member of the Hockey One League. The Sydney Bears and Sydney Ice Dogs play in the Australian Ice Hockey League. The Swifts are competitors in the national women's netball league.

Sailing on Sydney Harbour

Women were first allowed to participate in recreational swimming when separate baths were opened at Woolloomooloo Bay in the 1830s. From being illegal at the beginning of the century, sea bathing gained immense popularity during the early 1900s and the first surf lifesaving club was established at Bondi Beach.[392][393] Disputes about appropriate clothing for surf bathing surfaced occasionally and concerned men as well as women. The City2Surf is an annual 14 km (8.7 mi) running race from the CBD to Bondi Beach and has been held since 1971. In 2010, 80,000 runners participated which made it the largest run of its kind in the world.[394]

Sailing races have been held on Sydney Harbour since 1827.[395] Yachting has been popular amongst wealthier residents since the 1840s and the Royal Sydney Yacht Squadron was founded in 1862. The Sydney to Hobart Yacht Race is a 1,170 km (727 mi) event that starts from Sydney Harbour on Boxing Day.[396] Since its inception in 1945 it has been recognised as one of the most difficult yacht races in the world.[397] Six sailors died and 71 vessels of 115 failed to finish in the 1998 edition.[398]

Sydney Olympic Park was built for the 2000 Olympics and has become a major sporting and recreational precinct.

The Royal Sydney Golf Club is based in Rose Bay and since its opening in 1893 has hosted the Australian Open on 13 occasions.[392] Royal Randwick Racecourse opened in 1833 and holds several major cups throughout the year.[399]

Sydney benefitted from the construction of significant sporting infrastructure in preparation for its hosting of the 2000 Summer Olympics. The Sydney Olympic Park accommodates athletics, aquatics, tennis, hockey, archery, baseball, cycling, equestrian, and rowing facilities. It also includes the high capacity Stadium Australia used for rugby, soccer, and Australian rules football. The Sydney Football Stadium was completed in 1988 and was used for rugby and soccer matches. Sydney Cricket Ground was opened in 1878 and is used for both cricket and Australian rules football fixtures.[392]

Sydney was one of the host cities during the 2023 FIFA Women's World Cup. Sydney Football Stadium and Stadium Australia were selected as venues, with the later hosting the final.[400]

The Sydney International tennis tournament is held here at the beginning of each year as the warm-up for the Grand Slam in Melbourne. Two of the most successful tennis players in history (Ken Rosewall and Todd Woodbridge) were born in and live in the city.

Sydney co-hosted the FIBA Oceania Championship in 1979, 1985, 1989, 1995, 2007, 2009 and 2011.

Government

[[edit](#)]

See also: [Local government areas of New South Wales](#)

Historical governance

[[edit](#)]

[Parliament House](#) holds the [Government of New South Wales](#) and is the oldest public building in Australia.

The first five governors had near autocratic power in the colony of New South Wales, subject only to the laws of England and the supervision of the Colonial Office in London. Sydney was the seat of government for the colony which encompassed over half the Australian continent.^[401] The first Legislative Council met in 1826,^[402] and in 1842, the imperial parliament expanded and reformed the council, making it partly elected.^[403] In the same year, the town of Sydney officially became a city and an elected municipal council was established.^{[404][405]} The council had limited powers, mostly relating to services such as street lighting and drainage.^[406] Its boundaries were restricted to an area of 11.6 square kilometres, taking in the city centre and the modern suburbs of [Woolloomooloo](#), [Surry Hills](#), [Chippendale](#), and [Pyrmont](#).^[63] As Sydney grew, other municipal councils were formed to provide local administration.^[407]

In 1856, New South Wales achieved responsible government with the introduction of a bicameral parliament, based in Sydney, comprising a directly elected [Legislative Assembly](#) and a nominated [Legislative Council](#).^[408] With the federation of the Australian colonies in 1901, Sydney became the capital of the state of New South Wales and its administration was divided between the Commonwealth, State and constituent local governments.^[408]

Government in the present

[[edit](#)]

The **Sydney Town Hall** is the seat of the **City of Sydney**; the oldest **local government** in the city

In common with other Australian capital cities, Sydney has no single local government covering its whole area. **Local government areas** have responsibilities such as local roads, libraries, child care, community services and waste collection, whereas the state government retains responsibility for main roads, traffic control, public transport, policing, education, and major infrastructure project.[409] There are 33 local government areas which are wholly or mostly within Greater Sydney as defined by the Australian Statistical Geography Standard.[96][410]

- **Bayside**
- **Canterbury-Bankstown**
- **Blacktown**
- **Blue Mountains**
- **Burwood**
- **Camden**
- **Campbelltown**
- **Canada Bay**
- **Central Coast**
- **Cumberland**
- **Fairfield**
- **Georges River**
- **Hawkesbury**
- **The Hills**
- **Hornsby**
- **Hunter's Hill**
- **Inner West**
- **Ku-ring-gai**
- **Lane Cove**
- **Liverpool**
- **Mosman**
- **North Sydney**
- **Northern Beaches**
- **Parramatta**
- **Penrith**
- **Randwick**
- **Ryde**
- **Strathfield**
- **Sutherland**
- **Sydney**
- **Waverley**
- **Willoughby**
- **Wollondilly**

- o Woollahra

Government House is the official residence of the **Governor of New South Wales**

Sydney is the location of the secondary official residences of the **Governor-General** and **Prime Minister** – **Admiralty House** and **Kirribilli House** respectively.[411] The **Parliament of New South Wales** sits in **Parliament House** on **Macquarie Street**. This building was completed in 1816 and first served as a hospital. The Legislative Council moved into its northern wing in 1829 and by 1852 had entirely supplanted the surgeons from their quarters.[412] Several additions have been made as the Parliament has expanded, but it retains its original **Georgian** façade.[413] **Government House** was completed in 1845 and has served as the home of 25 Governors and 5 Governors-General.[414] The **Cabinet of Australia** also **meets** in Sydney when needed.

The highest court in the state is the Supreme Court of New South Wales, located in Queen's Square.[415] The city is also the home of numerous branches of the intermediate **District Court of New South Wales** and the lower **Local Court of New South Wales**.[416]

In the past, the state has tended to resist amalgamating Sydney's more populated local government areas as merged councils could pose a threat to its governmental power.[417] Established in 1842, the City of Sydney is one such local government area and includes the CBD and some adjoining inner suburbs.[418] It is responsible for fostering development in the local area, providing local services (waste collection and recycling, libraries, parks, sporting facilities), promoting the interests of residents, supporting organisations that target the local community, and attracting and providing infrastructure for commerce, tourism, and industry.[419] The City of Sydney is led by an elected Council and **Lord Mayor**.[420]

In federal politics, Sydney was initially considered as a **possibility for Australia's capital city**; the newly created city of **Canberra** ultimately filled this role.[421] Seven Australian **Prime Ministers have been born in** Sydney, more than any other city, including first Prime Minister **Edmund Barton** and current Prime Minister **Anthony Albanese**.

Essential public emergency services are provided and managed by the State Government. Greater Sydney is served by:

- o **New South Wales Police Force**
- o **New South Wales Ambulance**
- o **Fire and Rescue NSW**

Infrastructure

[\[edit\]](#)

Education

[\[edit\]](#)

Main article: [Education in Sydney](#)

The [University of Sydney](#)

Education became a focus for the colony from the 1870s when public schools began to form and schooling became compulsory.^[422] By 2011, 90% of working age residents had completed some schooling and 57% had completed the highest level of school.^[2] 1,390,703 people were enrolled in an educational institution in 2011 with 45.1% of these attending school and 16.5% studying at a university.^[260] Undergraduate or postgraduate qualifications are held by 22.5% of working age Sydney residents and 40.2% of working age residents of the City of Sydney.^{[2][423]} The most common fields of tertiary qualification are commerce (22.8%), engineering (13.4%), society and culture (10.8%), health (7.8%), and education (6.6%).^[2]

The [University of Technology Sydney](#)

There are six public universities based in Sydney: The [University of Sydney](#), [University of New South Wales](#), [University of Technology Sydney](#), [Macquarie University](#), [Western Sydney University](#), and [Australian Catholic University](#). Five public universities maintain secondary campuses in the city: the [University of Notre Dame Australia](#), [Central Queensland University](#), [Victoria University](#), [University of Wollongong](#), and [University of Newcastle](#). [Charles Sturt University](#) and [Southern Cross University](#) operate secondary campuses only designated for international students. In addition, four public universities offer programs in Sydney through third-party providers: [University of the Sunshine Coast](#), [La Trobe University](#), [Federation](#)

[University Australia](#) and [Charles Darwin University](#). 5.2% of residents of Sydney are attending a university.[424] The University of New South Wales and the University of Sydney are ranked equal 19th in the world,[425] the University of Technology Sydney is ranked in the top 100,[425] while Macquarie University is ranked 237, and Western Sydney University is ranked 474.[426] Sydney has public, denominational, and independent schools. 7.8% of Sydney residents are attending primary school and 6.4% are enrolled in secondary school.[424] There are 935 public preschool, primary, and secondary schools in Sydney that are administered by the [New South Wales Department of Education](#). [427] 14 of the 17 selective secondary schools in New South Wales are based in Sydney.[428]

Public vocational education and training in Sydney are run by [TAFE New South Wales](#) and began with the opening of the [Sydney Technical College](#) in 1878.[238] The college became the [Sydney Institute](#) in 1992 and now operates alongside its sister TAFE facilities across the Sydney metropolitan area, namely the [Northern Sydney Institute](#), the [Western Sydney Institute](#), and the [South Western Sydney Institute](#). At the 2011 census, 2.4% of Sydney residents are enrolled in a TAFE course.[424]

Health

[[edit](#)]

The [Sydney Hospital](#), completed in 1816

The first hospital in the new colony was a collection of tents at [The Rocks](#). Many of the convicts that survived the trip suffered from [dysentery](#), smallpox, [scurvy](#), and [typhoid](#). Healthcare facilities remained inadequate despite the arrival of a prefabricated hospital with the [Second Fleet](#) and the construction of new hospitals at Parramatta, [Windsor](#), and [Liverpool](#) in the 1790s.[429]

Governor Macquarie arranged for the construction of [Sydney Hospital](#), completed in 1816.[429] Parts of the facility have been repurposed for use as [Parliament House](#) but the hospital itself still operates. The city's first emergency department was established at Sydney Hospital in 1870. Demand for emergency medical care increased from 1895 with the introduction of an ambulance service.[429] The Sydney Hospital also housed Australia's first teaching facility for nurses, the Nightingale Wing, established with the input of [Florence Nightingale](#) in 1868.[430]

Healthcare was recognised as a right in the early 1900s and Sydney's public hospitals came under the oversight of the Government of New South Wales.^[429] The administration of healthcare across Sydney is handled by eight local health districts: Central Coast, Illawarra Shoalhaven, Sydney, Nepean Blue Mountains, Northern Sydney, South Eastern Sydney, South Western Sydney, and Western Sydney.^[431] The **Prince of Wales Hospital** was established in 1852 and became the first of several major hospitals to be opened.^[432] **St Vincent's Hospital** was founded in 1857,^[176] followed by **Royal Alexandra Hospital for Children** in 1880,^[433] the **Prince Henry Hospital** in 1881,^[434] the **Royal Prince Alfred Hospital** in 1882,^[435] the **Royal North Shore Hospital** in 1885,^[436] the **St George Hospital** in 1894,^[437] and the **Nepean Hospital** in 1895.^[438] **Westmead Hospital** in 1978 was the last major facility to open.^[439]

Transport

[\[edit\]](#)

Main article: **Transport in Sydney**

Roads

[\[edit\]](#)

Light Horse Interchange, the largest of its kind in Australia

The motor vehicle, more than any other factor, has determined the pattern of Sydney's urban development since **World War II**.^[440] The growth of low-density housing in the city's outer suburbs has made car ownership necessary for hundreds of thousands of households. The percentage of trips taken by car has increased from 13% in 1947 to 50% in 1960 and 70% in 1971.^[440] The most important roads in Sydney were the nine **Metroads**, including the 110 km (68 mi) **Sydney Orbital Network**. Sydney's reliance on motor vehicles and its sprawling road network has been criticised by proponents of mass public transport and high-density housing.^{[441][442][443]} The **Light Horse Interchange** in western Sydney is the largest in the southern hemisphere.^[444]

There can be up to 350,000 cars using Sydney's roads simultaneously during peak hour, leading to significant traffic congestion.^[440] 84.9% of Sydney households own a motor vehicle and 46.5% own two or more.^[260] With a rate of 26.3% in 2014, Sydney has the highest

utilisation of public transport for travel to work of any Australian capital.^[445] In contrast, in 2014 only 25.2% of working residents in the City of Sydney use a car, whilst 15.8% take a train, 13.3% use a bus, and 25.3% walk.^[446] Several significant infrastructure projects have been completed since. The CBD features a **series of alleyways and lanes** that provide **off-street** vehicular access to city buildings and as well as pedestrian routes through city buildings.^[447]

Suburban trains

[\[edit\]](#)

Main article: **Sydney Trains**

Central station is the busiest railway station in Australia, and the city's main public transport hub.

Established in 1906, **Central station** is the largest and busiest railway station in the state and is the main hub of the city's **rail network**.^[448] **Sydney Trains** is the **suburban rail** service. Its tracks form part of the New South Wales railway network. It serves 168 stations across the city and had an annual ridership of 302 million passenger journeys in 2023–24.^[449] Sydney's railway was first constructed in 1854 with progressive extension to the network to serve both freight and passengers. The main station is the **Central railway station** in the southern part of the CBD. In the 1850s and 1860s, the railway reached areas that are now outer suburbs of Sydney.^[440]

Metro

[\[edit\]](#)

Main article: **Sydney Metro**

Sydney Metro, a driverless **rapid transit** system separate from the suburban commuter network, commenced operation in May 2019 and was extended through the city to Sydenham on 19 August 2024. This line will be extended to Bankstown in 2025 and a new line through the inner west to Parramatta is planned to be built by 2030.^{[450][451]} It currently serves 21 stations. A line to serve the greater west is planned for 2026 and will include a station for the **second international airport**.

Light rail

[[edit](#)]

Main article: [Light rail in Sydney](#)

The [CBD and South East Light Rail](#) connects Sydney's CBD with the Eastern Suburbs.

Sydney once had one of the [largest tram networks](#) in the British Empire after London.^[452] It served routes covering 291 km (181 mi). The internal combustion engine made buses more flexible than trams and consequently more popular, leading to the progressive closure of the network with the final tram operating in 1961.^[440] From 1930 there were 612 buses across Sydney carrying 90 million passengers per annum.^[453]

In 1997, the [Inner West Light Rail](#) opened between Central station and [Wentworth Park](#). It was extended to [Lilyfield](#) in 2000 and then [Dulwich Hill](#) in 2014. It links the [Inner West](#) and [Darling Harbour](#) with [Central station](#) and facilitated 9.1 million journeys in the 2016–17 financial year.^[454] A second, the [CBD and South East Light Rail](#) 12 km (7.5 mi) line serving the CBD and Eastern Suburbs opened in 2019–2020.^[455] A [light rail line](#) serving Western Sydney opened in 2024.

Buses

[[edit](#)]

Main article: [Buses in Sydney](#)

Bus services are conducted by private operators under contract to [Transport for NSW](#). Integrated tickets called [Opal cards](#) operate on bus routes. In total, nearly 225 million boardings were recorded across the bus network.^[456] [NightRide](#) is a nightly bus service that operate between midnight and 5am.

Ferries

[[edit](#)]

Main articles: [Sydney Ferries](#), [List of Sydney Harbour ferries](#), and [Timeline of Sydney Harbour ferries](#)

A [Freshwater-class ferry](#) Departing [Circular Quay](#) to Manly

At the time the Sydney Harbour Bridge opened in 1932, the city's [ferry service](#) was the largest in the world.^[457] Patronage declined from 37 million passengers in 1945 to 11 million in 1963 but has recovered somewhat in recent years.^[440] From its hub at [Circular Quay](#), the [ferry network](#) extends from [Manly](#) to [Parramatta](#).^[457] Ferries in sydney are operated by [Transdev Sydney Ferries](#) and operates 10 routes.

Airports

[\[edit\]](#)

[Sydney Airport](#), officially "Sydney Kingsford-Smith Airport", is located in [Mascot](#). It services 46 international and 23 domestic destinations.^[26] As the busiest airport in Australia, it handled 37.9 million passengers in 2013 and 530,000 tonnes of freight in 2011.^[26] A second airport, [Western Sydney Airport](#), is under construction at [Badgerys Creek](#) and will open in late 2026,^[458] at a cost of \$2.5 billion.^[459] Notably, it will not feature a [curfew](#), unlike Sydney Kingsford-Smith Airport, which imposes a suspension of all aircraft operations between 11 pm and 6 am. [Bankstown Airport](#) is Sydney's second busiest airport, and serves general aviation, charter and some scheduled cargo flights. Bankstown is also the fourth busiest airport in Australia by number of aircraft movements.^[460] [Port Botany](#) has surpassed Port Jackson as the city's major shipping port. Cruise ship terminals are located at [Sydney Cove](#) and [White Bay](#).

Utilities

[\[edit\]](#)

[Warragamba Dam](#) is Sydney's largest water supply dam.

Obtaining sufficient fresh water was difficult during early colonial times. A catchment called the **Tank Stream** sourced water from what is now the CBD but was little more than an open sewer by the end of the 1700s.^[461] The Botany Swamps Scheme was one of several ventures during the mid-1800s that saw the construction of wells, tunnels, steam pumping stations, and small dams to service Sydney's growing population.^[461]

The **Upper Nepean Scheme** came into operation in 1886. It transports water 100 km (62 mi) from the **Nepean**, **Cataract**, and **Cordeaux** rivers and continues to service about 15% of Sydney's water needs.^[461] Dams were built on these three rivers between 1907 and 1935.^[461] In 1977 the **Shoalhaven Scheme** brought several more dams into service.^[462]

The state-owned corporation **WaterNSW** now manages eleven major dams: **Warragamba**, one of the largest domestic water supply dams in the world,^[463] **Woronora**, **Cataract**, **Cordeaux**, **Nepean**, **Avon**, **Wingecarribee Reservoir**, **Fitzroy Falls Reservoir**, **Tallowa**, the **Blue Mountains Dams**, and **Prospect Reservoir**.^[464] Water is collected from five catchment areas covering 16,000 km² (6,178 sq mi) and total storage amounts to 2.6 TL (0.6 cu mi).^[464] The **Sydney Desalination Plant** came into operation in 2010.^[461] WaterNSW supplies bulk water to **Sydney Water**, a state-owned corporation that operates water distribution, sewerage and storm water management services.

Sydney's electricity infrastructure is maintained by **Ausgrid** and **Endeavour Energy**.^{[465][466]} Their combined networks include over 815,000 poles and 83,000 km (52,000 mi) of cables. **Submarine communications cable** systems in Sydney include the **Australia–Japan Cable**, **Telstra Endeavour** and the **Southern Cross Cable**, which link Australia and countries in the Pacific.^{[467][468][469]}

Environmental issues and pollution reduction

^{[[edit](#)]}

Main article: **Environmental issues in Australia**

Further information: **Climate change in Australia** and **Renewable energy in Australia**

Air quality

^{[[edit](#)]}

George Street and bushfire smoke in December 2019

As **climate change**, **greenhouse gas emissions** and pollution have become a major issue for Australia, Sydney has in the past been criticised for its lack of focus on reducing pollution and emissions and maintaining **water quality**.^[470] The release of the Metropolitan Air Quality Scheme (MAQS) led to a broader understanding of the causation of pollution in Sydney, allowing the government to form appropriate responses.^[471]

The **2019–20 Australian bushfire season** significantly impacted outer Sydney and dramatically reduced air quality, leading to a smoky haze that lingered for days. The **air quality** was 11 times the **hazardous** level in some days,^{[472][473]} worse than **New Delhi's**,^[474] it was compared to "smoking 32 cigarettes" by Brian Oliver, a respiratory diseases scientist at the **University of Technology Sydney**.^[475] Since Sydney is surrounded by bushland and forest,^[476] bushfires can ring the region in a **natural phenomena** that is labelled "ring of fire".^{[477][478][479][480][481]}

The City of Sydney became the first council in Australia to achieve formal certification as **carbon-neutral** in 2008.^{[482][483]} The city has reduced its 2007 carbon emissions by 6% and since 2006 has reduced carbon emissions from city buildings by up to 20%.^{[484][485]} The *Sustainable Sydney 2030* program presented a guide to reducing energy in homes and offices by 30%.^{[484][486]} Reductions in energy consumption have slashed energy bills by \$30 million a year.^[487] **Solar panels** have been established on many CBD buildings to minimise carbon pollution by around 3,000 tonnes a year.^[488]

The city also has an "**urban forest** growth strategy", in which it aims to regularly increase the **tree coverage** in the city by frequently planting trees with strong leaf density and **vegetation** to provide cleaner air and create moisture during hot weather, thus lowering city temperatures.^[489] Sydney has also become a leader in the development of **green office buildings** and enforcing the requirement of all building proposals to be energy-efficient. The **One Central Park** development, completed in 2013, is an example of this implementation.^{[490][491][492][493]}

Car-dependency

[**edit**]

Traffic congestion on the **Warringah Freeway**, **Milsons Point**

Australian cities are some of the most **car-dependent** cities in the world,[494] especially by world city standards, although Sydney's is the lowest of Australia's major cities at 66%.^[495] Sydney also has the **highest usage of public transport** in an Australian city, at 27%—comparable with New York City, Shanghai and Berlin. Despite its high ranking for an Australian city, Sydney has a low level of mass-transit services, with a historically low-density layout and significant **urban sprawl**, thus increasing the likelihood of car dependency.^{[496][497]}

Strategies have been implemented to reduce private **vehicle pollution** by encouraging **mass** and **public transit**,^[498] initiating the development of high density housing and introducing a fleet of 10 new **electric cars**, the largest order of the pollution-free vehicle in Australia.^[499] Electric cars do not produce carbon monoxide and **nitrous oxide**, which contribute to climate change.^{[500][501]} **Cycling trips** increased by 113% across Sydney's inner-city from 2010 to 2015, at which point about 2,000 bikes were passing through top peak-hour intersections on an average weekday.^[484] Transport developments in the **north-west** and east of the city have been designed to encourage use of the expanding public transportation system.

Sister cities

[[edit](#)]

Sister cities of Sydney include:

- **San Francisco, United States of America**
- **Wellington, New Zealand**
- **Florence, Italy**
- **Nagoya, Japan**
- **Portsmouth, United Kingdom**

Frequently Asked Questions

What are local SEO services in Sydney?

Local SEO services in Sydney focus on optimizing a business's online presence to attract local customers. This includes claiming local business listings, optimizing Google My Business profiles, using location-specific keywords, and ensuring consistent NAP (Name, Address, Phone) information across the web.

Why is local SEO important for small businesses?

Local SEO helps small businesses attract customers from their immediate area, which is crucial for brick-and-mortar stores and service providers. By optimizing local listings, using location-based keywords, and maintaining accurate NAP information, you increase visibility, build trust, and drive more foot traffic.

How does content marketing impact SEO?

Content marketing and SEO work hand-in-hand. High-quality, relevant content attracts readers, earns backlinks, and encourages longer time spent on your site—factors that all contribute to better search engine rankings. Engaging, well-optimized content also improves user experience and helps convert visitors into customers.

How can search engine optimisation consultants help my business?

Search engine optimisation consultants analyze your website and its performance, identify issues, and recommend strategies to improve your search rankings. They provide guidance on keyword selection, on-page optimization, link building, and content strategy to increase visibility and attract more traffic.

What is a local SEO agency?

A local SEO agency specializes in improving a business's visibility within a specific geographic area. They focus on optimizing local citations, managing Google My Business profiles, and targeting location-based keywords to attract nearby customers.
